List of Tables

1. Relation between Consumption and Income Based on Budget Data, for Different Countries, Dates, and Groups of Consumer Units 41
2. Comparison of Heights of Regressions in Current and Constant Prices, Eight Studies from 1888–1890 to 1950 45
5. Relation between Consumption and Income for Independent Business, Farm, and Other Spending Units, 1948–1950 71
8. Relation of Savings and Income to Age of Head of Spending Unit, United States, 1946 91
9. Relation of Savings and Income to Age of Head of Income Unit, Great Britain, 1953 94
10. Comparison of Observed and Predicted Results for Income-Change Classes, Farm Security Administration Sample of Farm Families 102
11. Comparison of Observed and Predicted Results for Income-Change Classes, Based on Survey of Consumer Finances Data, 1947 and 1948 106
12. Relation between Consumption and Income Based on Time Series Data for the United States, for Different Periods and Concepts of Consumption 126
LIST OF TABLES AND FIGURES

13. Marginal Propensities to Consume Computed from Four Different Forms of Time Series Data for the United States 132

14. Selected Measures Derived from Regressions of Consumption on Current and Past Income Computed by Modigliani, Duesenberry, and Mack, and Recomputed by Ferber 140

15. Three Consumption Functions for the United States: Regressions of Consumption on Current and Past Incomes, Nonwar Years 1905 through 1951 147

17. Comparison of Relative and Absolute Income Hypotheses Based on Analysis of Variance for Two Groups of Communities, 1935–1936 180

18. Correlation Coefficients between Incomes of Identical Units in Different Years 187

19. Summary of Correlation Coefficients in Table 18 for Three Principal Bodies of Nonfarm Data 189

20. Alternative Estimates of $P_y$ and Other Data from Survey of Consumer Finances, 1953 Reinterview Sample, for Three Occupational Groups 195

21. Relative Dispersion of Measured Income and Measured Consumption and Their Permanent and Transitory Components, Based on Survey of Consumer Finances Data, 1947 and 1948 202

List of Figures

1. Hypothetical Indifference Curves and Budget Lines of a Consumer Unit for Consumption in Two Time Units 8

2. Illustration of Alternative Interpretations of Permanent Income 24

3. Hypothetical Relation between Measured Consumption and Measured Income 34

4. Regressions of Consumption on Income, 1888–1890 and 1950, and the Relation between Mean Consumption and Mean Income in Eight Studies 47

5. Regressions of Consumption on Income for the United States and the United Kingdom, Spending or Income Units of One or More Persons, Urban plus Rural, United States, 1950, United Kingdom, 1951–1952 56
LIST OF FIGURES

6. Regressions of Consumption on Income for Farm and Nonfarm Families, United States, 1935–1936 and 1941 59
7. Hypothetical Regressions of Consumption on Income for Farm and Nonfarm Families 64
9. Regressions of Consumption on Income for Native White and Negro Nonrelief Families, Columbus, Ohio, and Atlanta, Georgia, 1935–1936 81
10. Hypothetical Regressions for Groups Classified by Change in Income 99
11. Regression of Family Consumption on Income for Farm Families, Five Income-Change Groups, 1942 101
12. Regressions of Consumption on Income for Five Income-Change Groups, based on Survey of Consumer Finances Data, 1947 and 1948 105
13. Relation of Personal Consumption Expenditures per Capita to Personal Disposable Income per Capita, 1897–1949 117
14. Measured Disposable Income per Capita, and Consumption per Capita Measured and as Estimated from Three Regressions, 1905–1949 148
15. Relation between Computed Income Elasticity of Consumption and Computed Importance of Permanent Component of Income 193
