This book arises from a program of research on ‘the urban brain’ initially supported by a grant from the UK’s Economic and Social Research Council (ESRC) under its ‘Transforming Social Science’ scheme for a project entitled A New Sociology for a New Century: Transforming the Relations between Sociology and Neuroscience, through a Study of Mental Life and the City (ES/L003074/1). The co-investigators on this grant were Nikolas Rose and Ilina Singh, and Des Fitzgerald was the named researcher. This enabled NR and DF to set up the Urban Brain Lab in the Department of Global Health and Social Medicine of King’s College London and to organize a series of international workshops on the issues we discuss in this book. We would like to thank Ilina Singh for our collaboration in the early stages of this work, and for her generous permission to use material in the present book from two of the initial journal articles on which she was a joint author. Work funded by the initial grant led to a subsequent grant from the ESRC’s Newton Scheme, led by Professor Nick Manning, for a project entitled Mental Health, Migration and the Megacity (ESRC-NSFC Award ES/N010892/1), and we express our thanks to Nick, and to Ash Amin, Li Jie, and Lisa Richaud, for their collaboration on this project, and for many discussions in Shanghai, London, and elsewhere that have had a major impact on our thoughts in this book. Two further small grants arising from the collaborative arrangement between King’s College and FAPESP (Fundação de Amparo à Pesquisa do Estado de São Paulo) enabled us to undertake a scoping review of mental health, migration, and the megacity in São Paulo, followed by a project on Mental Health in Adversity: An Ethnographic Study of the Experience of Poor Mental Health in the Favelas of São Paulo, and we would like to acknowledge our collaborators at the Institute of Psychiatry, University of São Paulo, notably Laura Andrade. We thank the Brocher foundation for their support, which enabled us to host a workshop in January 2019 at the home of the Brocher Foundation, on the banks of Lac Léman. This workshop brought together research teams from Shanghai, São Paulo, and Toronto to work
on our Mental Health, Migration, and Megacities’ projects, together with key urban mental health researchers from Berlin and Lausanne, and from three of the innovative ‘Thrive’ partnerships who are developing policies and practices for supporting mentally healthy cities—in New York (ThriveNYC), London (ThriveLDN), and Toronto (ThriveTO)—as well as others named below. We would like to thank Brenda Roche and Kwame McKenzie from the Wellesley Institute, Toronto, and we would also like to thank Milena Bister, Patrick Biehler, and Jörg Niewöhner, from Humboldt University, and Ole Söderström from Neuchâtel. We also thank the ESRC for a grant from the ESRC’s Urban Transformation program for participation in a workshop in Rio de Janeiro, and we would like to thank Michael Keith and Andreza Aruska de Souza Santos for their support. NR was partly supported, in the final stages of the preparation of the book, by the ESRC’s grant to the Centre for Society and Mental Health at King’s College London (ES/S012567/1). DF was also supported by a grant from the Leverhulme Trust (PLP-2017–152) and, in the later stages, the Wellcome Trust (203109/Z/16/Z). Of course, the views expressed in this book are solely those of the authors. The book has benefited greatly from comments from the reviewers for Princeton University Press, especially from Michael Keith. Thanks to our copyeditor Karen Verde for helping us to greatly improve the clarity of the text and to Terri O’Prey for supporting us through the publication process. Last but not least, we would like to thank our editor at Princeton, Fred Appel, for his patience, encouragement, and advice over the many delays that we encountered in bringing this book to a conclusion.
THE URBAN BRAIN
