LIST OF ILLUSTRATIONS

Figures

3.1 The expansion of border fence construction, 1965–2016 87
5.1 Estimated total global migration flow from 1960 to 2015 125
5.2 Logged global migration flows by period, 1960–2015 126
5.3 Emigration underflows have increased from 1960 to 2015 133
5.4 Low-income countries have the largest emigration underflows 135
5.5 The gap between OECD and sub-Saharan African countries 138
5.6 Racial bias in international migration flows 141
5.7 Simulated differences in migration bias between White and Black states, 1960–2015 143
5.8 Border and land control policies have increased over time 149
5.9 Bordering and legal entry policies pull in opposite directions across all countries in the DEMIG dataset 154
5.10 Latent policy restrictiveness increases over time and varies by country 156–157
5.11 The moderating effect of liberal democracy? 168
6.1 Liberal democracy moderates the effect of postcolonial inflows on restrictive policies 208
6.2 Postcolonial immigration inflows moderate the effect of being a colonizer on policy restrictiveness 212
6.3 Comparing a former colonial power to a noncolonial power 214
7.1 IO membership and the proliferation of border fences 251
7.2 Interaction between colonial history and IOs 263
7.3 Comparing the probability of fence construction between former colonies and colonizers 265
A.1 Distribution of migration flows, 1960–2015 296
C.1 Distribution of aggregate immigration policy restrictiveness, 1960–2015 301
C.2 Distribution of measures of racially different immigration flows 302
C.3 Linear-additive test 303

Tables

3.1 Shares of world GDP, 1700–1952 75
5.1 Example of dyadic migration deviations 122
5.2 Example of sending-state migration deviations 123
5.3 Average migration bias by world region 136
5.4 Country-years included in the DEMIG policy database 147
5.5 An excerpt from the DEMIG policy dataset 148
5.6 United States immigration policy changes, 2005 152
5.7 Association between inflows and increased policy restrictiveness (1960–2013) by three measures 162
5.8 Regression models of immigration policy restrictiveness, 1960–2013 163
5.9 Countries with the largest positive effect of average ancestral distance of immigration population 169
6.1 Are immigration flows from former colonies associated with greater migration policy restrictiveness? (1960–2013) 206
6.2 Effect of colonial histories 210
6.3 Countries with the largest positive effect of postcolonial inflows on immigration policy 213
7.1 Raw count of border fences by region, 2014 255
7.2 Regression models of new border fence construction 259
7.3 Regional random intercepts for baseline likelihood of building a border fence 261
A.1 Baseline model results 297
C.1 Distribution of racially different immigration measures by region 302
C.2  Model specification with lagged dependent variable 304
C.3  Regression models of immigration policy restrictiveness with postcolonial variable 305
C.4  Logistic regressions with time trend 306
C.5  Logistic regressions with lagged dependent variable 307
