Acknowledgments

The research and writing of a book involves the help and support of a great many people.

This book grew out of a thesis prepared under the supervision of Professor Bob Bothwell at the University of Toronto. He encouraged me in this endeavour from the beginning and his help throughout has been invaluable. I am also grateful to Professors Craig Broun and Michael Bliss for many helpful comments.

Atomic Energy of Canada Limited was extremely generous in allowing me free and open access to all their files pertaining to W.B. Lewis. My research was largely carried out at the Chalk River Nuclear Laboratories (CRNL), where Ruth Everson and Carol Lachapelle were enormously helpful and patient in guiding me to a vast number of files. I cannot thank them enough. Morris Dament happily retrieved a seemingly endless number of lectures, memoranda, and reports by Lewis stored at the Scientific Documents Distribution Office. I also appreciate the help given by Ralph Robinson, Phyllis Crozier, and Gwynedd Gerry for help with the photographs.

Staff at the National Archives of Canada, the Public Records Office in London, and the Churchill College Archives Centre in Cambridge were very helpful. Janet Dudley at the Royal Signals and Radar Establishment directed me to Telecommunications Research Establishment (TRE) documents still stored in Malvern.

A great number of scientists and engineers from both Chalk River and Ontario Hydro helped me to gain a clearer picture of Lewis’s abilities and personality through interviews. I am particularly grateful to Geoff Hanna for his tireless efforts, his patience, and most of all, his encouragement and support.

My editors, Claire Gigantes and Joan McGilvray, have been thorough with my manuscript and patient with me. I thank them for their support.
viii Acknowledgments

Financial assistance from the Social Sciences and Humanities Research Council of Canada, the Associates of the University of Toronto, the Centre for International Studies, the School of Graduate Studies, and the University of Toronto is gratefully acknowledged.

A great many friends have offered encouragement and the opportunity to relax over the past five years. Thanks particularly to Kay and George Rich for a lovely stay in Malvern, the lunch-room gang at Chalk River, and Mary Halloran for well-timed pep talks. My colleagues at the Science and Technology Division of the Library of Parliament’s Research Branch have been enthusiastic about my extracurricular activities. I am grateful also to Roger Sarty for helpful discussions and Glenn and Joan Sarty for Cape Cod rest and relaxation.

My husband, Leigh Sarty, has been wonderful throughout. He now knows more about W.B. Lewis and nuclear power reactors than I’m sure he ever believed possible. Without him, this book could not have been written. My son, Michael, has not yet been given any editorial duties but his cheery presence is a constant joy. My parents, Pat and Eric, have been understanding and supportive throughout my metamorphosis from physicist to historian. This book is dedicated to them.
