Writing this book would not have been possible without the active assistance and engagement of a number of people. I first acknowledge the collaboration of the multi-stakeholder institutions, auditing companies, and global firms that have been willing to share data with me. Given that private regulation is essentially “private,” it is not often that organizations in the private regulation ecosystem are willing to share data and provide access for researchers to undertake case studies (especially when the outcome is unknown). To the organizations that did so, I owe a major debt. I cannot name all the organizations involved because of non-disclosure agreements, but you know who you are—and I thank you.

Every project needs key catalysts. Besides John Oliver (see the preface), I had Harry Katz, Ian Spaulding, and Kevin Franklin. They provided encouragement, gave me the confidence that such a book needed to be written, and assured me it was possible.

This book also would not have been possible without support from the New Conversations Project (NCP) at Cornell, for which I serve as academic director, and especially the support and encouragement of Anna Burger, NCP’s executive director. Anna strongly encouraged me to write the book and shielded me from my responsibilities to NCP getting in the way. I am also indebted to NCP’s advisory board, and specifically to Bruce Raynor and David Hayer, who facilitated my access to several organizations.

I benefited from advice and the active interest of several people in the global supply chain and labor ecosystem. They include Arianna Rossi and Luisa Lupo from the International Labour Organization’s Better Work program; Alexander Kohnstamm, Hector Chavez, and Martin Curley from the Fair Wear Foundation; and Victor Wong and Ashita Soni from Gap Inc.

Most of all, I have benefited from the work of many scholars. In addition to Mathew Amengual and Greg Distelhorst, whose ongoing research on sourcing and compliance has advanced both my own thinking and the New Conversation Project, this work stands on the shoulders of giants who have written extensively on labor issues in global supply chains. These include, in particular, Richard Locke, Tim Bartley, Niklas Egels-Zandén, and Michael Toffel (with their various colleagues), whose prior empirical work inspired me to persist in obtaining empirical data.
I wrote this book while on sabbatical leave from Cornell University and need to show my appreciation for my host institution, the department of management at the London School of Economics (LSE). I had a quiet corner office where I could write without interruption, and I benefited from the fellowship of colleagues at LSE, including David Marsden, Sarah Ashwin, Eddy Donnelly, Chunyun Li, Jonathan Booth, Jeff Thomas, Frido Wenten, Mariana Bogdanova, and especially Ruth Reaney, who edited some chapters and corrected my awful grammar.

I also thank workshop participants at Cardiff University, University of Warwick, LSE, Loughborough (London), and King’s College (Chiara Benassi in particular) for helpful comments.

My gratitude goes to my postdoctoral associate Jinsun Bae, who spent inordinate amounts of time cleaning and organizing my data and doing the preliminary analyses that appear in the many tables of this book, and Chunyun Li, whose advice on data analysis was invaluable, as was the advice and assistance I received from Mingwei Liu and his student Yan Pan. Last, but not least, I thank my students who have assisted with writing some of the chapters: Matt Fischer-Daly, Chris Raymond, and Ning Li.

Fran Benson, the editorial director of ILR Press (an imprint of Cornell University Press), with whom I have interacted many times over the past three decades, deserves kudos for bringing this book out. And I thank Scott Cooper, whose professional editing expertise has turned an unreadable, imprecise, obfuscating, overly academic manuscript into a volume that is more accessible to all. He is an incredible editor.

Finally, to my colleagues at the ILR School: it has been a pleasure working with you all.
