

FIGURES AND TABLES

Figures

CHAPTER ONE

- 1.1. The OED triangle 8

CHAPTER TWO

- 2.1. Decomposition results, Swedish women 27

CHAPTER THREE: USA

- 3.1. Changes in the distribution of education 41
- 3.2. Changes in the occupational structure 43
- 3.3. Trends in vertical absolute mobility and immobility across cohorts 45
- 3.4. Trends in (absolute) class gaps in education 47
- 3.5. Absolute class attainment by educational attainment 48
- 3.6. Absolute mobility trends among university graduates 50
- 3.7. Strength of relative association between origin and destination by educational degree 52
- 3.8. Relative trends in two-way associations between origin, destination, and education 54
- 3.9. Mechanisms behind social fluidity trends 60

CHAPTER FOUR: SWEDEN

- 4.1. Changes in class origins of respondents in different birth cohorts 75
- 4.2. Changes across cohorts in class destinations for 35- to 70-year-old men and women 76
- 4.3. Changes across cohorts in educational qualifications for 35- to 70-year-old men and women 77

- 4.4. Absolute mobility by cohort 80
- 4.5. Upward and downward mobility by cohort, selected class origins 81
- 4.6. Change over cohort in the bivariate associations between class origin and education (OE), origin and destination class (OD), and education and destination (ED), respectively 83
- 4.7. Class origin effects on destination class at different levels of education 84
- 4.8. Accounting for trends in observed social fluidity by educational equalization, educational expansion, and change in the direct origin–destination effect 86

CHAPTER FIVE: FRANCE

- 5.1. Trends over cohorts in the origin, destination, and education distributions 103
- 5.2. Contribution of the four mechanisms to the increase in social fluidity over cohorts (I) 116
- 5.3. Contribution of the four mechanisms to the increase in social fluidity over cohorts (II) 117

CHAPTER SIX: GERMANY

- 6.1. Marginal distribution changes of origin (O) and destination classes (D) and education over cohorts 131
- 6.2. Change of bivariate associations of O E and D over cohorts 133
- 6.3. Absolute mobility rates 134
- 6.4. OD, OE, and ED unidiffs 137
- 6.5. Uniform difference variation of direct OD effects over education levels 140
- 6.6. Total (solid lines) and direct (broken lines) effects of origin on destination from multinomial regression using KHB decomposition 141
- 6.7. Unidiff parameters taken from simulation models 144

CHAPTER SEVEN: SWITZERLAND

- 7.1. Trends in absolute social mobility 163
- 7.2. Unidiff parameters for change over cohorts in the OD, OE, and ED associations 165

- 7.3. Unidiff parameters for differences over educational categories in the OD association 167
- 7.4. KHB decomposition 168
- 7.5. Simulations for men and women 170

CHAPTER EIGHT: THE NETHERLANDS

- 8.1. Changes in class origins 178
- 8.2. Changes in class destinations, men and women 179
- 8.3. Changes in education, men and women 180
- 8.4. Absolute mobility trends, men and women 184
- 8.5. Upward and downward mobility, men and women 185
- 8.6. OD, OE, and ED unidiffs, men and women 186
- 8.7. OD association over E 188
- 8.8. Decomposition results, men and women 189
- 8.9. Education and service class entry 191

CHAPTER NINE: ITALY

- 9.1. Distributions of class of origin, class of destination, and education across cohorts, separately for men and women 204
- 9.2. Trends in mobility patterns among men and women; cell values of mobility tables as percentages of total sample 205
- 9.3. Outflow mobility rates for men and women 206
- 9.4. Uniform difference coefficients for change over cohorts in OD, ED, OE, and OD|E, controlled (dashed lines) and not controlled (solid lines) for period effects—Italian men 209
- 9.5. Multinomial logistic regression to study IEOs among Italian men (age selection 30–75) 212
- 9.6. Multinomial logistic regressions to study gross and direct OD associations among Italian men (age selection 30–75)—Change in the chance of belonging to class IVab or V–VI–VIIa relative to class I–II 214
- 9.7. Uniform difference coefficients for change over cohorts in OD, ED, OE, and OD|E, controlled (dashed lines) and not controlled (solid lines) for period effects—Italian women 216
- 9.8. Simulation analysis of trends in social fluidity 217

CHAPTER TEN: SPAIN

- 10.1. Changes in class origins of respondents in different birth cohorts 233
- 10.2. Change across cohorts in class destinations for 35- to 70-year-olds 233
- 10.3. Changes across cohorts in educational qualifications for 35- to 70-year-olds 235
- 10.4. Absolute mobility trends 239
- 10.5. Upward and downward mobility trends 240
- 10.6. OD, OE, and ED unidiffs 243
- 10.7. OD unidiffed over E, men and women 244
- 10.8. Simulation results 245

CHAPTER ELEVEN: EUROPE AND THE UNITED STATES

- 11.1. Percentage in top and bottom classes by birth cohort, men 252
- 11.2. Dissimilarity index, men 254
- 11.3. Total mobility rate, men 255
- 11.4. Upward and downward mobility rates, men 257
- 11.5. Service-class origins and destinations, men 239
- 11.6. Women's labor force participation rate, 1960–2015 263
- 11.7. Percentage in top and bottom classes by birth cohort, women 265
- 11.8. Dissimilarity index, women 266
- 11.9. Total mobility rate, women 266
- 11.10. Upward and downward mobility rates, women 267
- 11.11. Service-class origins and destinations, women 271
- 11.12. Low and high education, men 273
- 11.13. Low and high education, women 274
- 11.14. Log odds of staying in and of entering the service class, men 281
- 11.15. Log odds of staying in and of entering the service class, women 282
- 11.16. Normed service class log odds ratios 283
- 11.17. OD, OE, and simulated OD trends, men 284
- 11.18. OD, OE, and simulated OD trends, women 285

Tables

CHAPTER ONE

- 1.1. The Erikson-Goldthorpe class schema as used in Germany, France, Sweden, the Netherlands, and Switzerland 12
- 1.2. The CASMIN educational classification 13
- 1.3. Surveys, cohorts, and ages in the French data 15
- 1.4. Age ranges, cohorts, classes, and educational categories 17

CHAPTER THREE: USA

- 3.1. Sample characteristics by birth cohort 39
- 3.2. Cohort trends in education and class structure (percentage) 42
- 3.3. Absolute mobility rates (percentages) 45
- 3.4. The role of education as mediator of social fluidity (percentage) 53
- 3.5. Fit statistics for observed trends in mobility components 56
- 3.6. Incremental linear change in social fluidity for each channel 61

CHAPTER FOUR: SWEDEN

- 4.1. Intergenerational (parent-to-child) social class mobility among men and women, aged 35–70 and born 1906–72 (outflow [row] percentages) 78
- 4.2. Intergenerational social class mobility among men aged 40–50 born 1926–36 and 1955–67 (outflow [row] percentages) 79
- 4.3. Intergenerational social class mobility among women aged 40–50 born 1926–36 and 1955–67 (outflow [row] percentages) 79
- 4.4. Goodness-of-fit of models of no change and unidiff change over birth cohorts in OD, OE, and ED relationships 83

CHAPTER FIVE: FRANCE

- 5.1. Observational design 101
- 5.2. Absolute class mobility rates in the 1906–24 and 1965–73 cohorts 107

- 5.3. Change over cohorts in the origin–destination association 108
- 5.4. Change over cohorts in the origin–education association 111
- 5.5. Change over cohorts in the education–destination association 113
- 5.6. The interaction between education, class origin, and class destination 114

CHAPTER SIX: GERMANY

- 6.1. Cohort size, age range, and mean age at which cohort members are surveyed 129
- 6.2. Log-linear models of change over cohorts in the bivariate associations of OD, OE, and ED 136
- 6.3. Log-linear models of change over cohorts in the OED triangle (COED table) 138

CHAPTER SEVEN: SWITZERLAND

- 7.1. Trends over cohorts in educational expansion and in educational attainment according to class origin over cohorts (outflow percentages) 158
- 7.2. Trends in labor market tertiarisation (percentages) 161
- 7.3. Trends in class destination by educational attainment (outflow percentages) 162
- 7.4. Log-linear models of change in the OD, OE, and ED associations 164

CHAPTER EIGHT: THE NETHERLANDS

- 8.1. Social class mobility among men and women, aged 35–70 and born 1908–74 (outflow [row] percentages) 180
- 8.2. Social class mobility among men aged 35–70 and born 1925–34 and 1955–64 (outflow [row] percentages) 181
- 8.3. Social class mobility among women aged 35–70 and born 1925–34 and 1955–64 (outflow [row] percentages) 183
- 8.4. Goodness-of-fit of models of no change and unidiff change over birth cohorts in OD, OE, and ED relationships 186

CHAPTER NINE: ITALY

- 9.1. Italian men and women selected for the analyses of social mobility (age selection 30–65) 203

CHAPTER TEN: SPAIN

- 10.1. Birth cohorts and historical landmarks 232
- 10.2. Social class mobility among men and women, aged 35–70 and born 1910–71 (outflow [row] percentages) 236
- 10.3. Social class mobility among men born 1925–36 and 1949–60 (outflow [row] percentages) 237
- 10.4. Social class mobility among women born 1925–36 and 1949–60 (outflow [row] percentages) 238
- 10.5. Goodness-of-fit of models on no change and unidiff change over birth cohort and education in OD, OE, ED 241

CHAPTER ELEVEN: EUROPE AND THE UNITED STATES

- 11.1. Percentages of men with origins in class I + II and class VII/IIIb in the oldest and youngest cohorts 258
- 11.2. Percentages of all men in each cohort who are immobile in classes I + II, mobile into classes I + II, and mobile out of classes I + II 260
- 11.3. Percentages of all men in each cohort who are immobile in class VII/IIIb, mobile into VII/IIIb (class VII for men in the USA), and mobile out of VII/IIIb 261
- 11.4. Differences between men and women in upward and downward mobility rates (men's rates minus women's) 268
- 11.5. Percentages of all women in each cohort who are immobile in classes I + II, mobile into classes I + II, and mobile out of classes I + II 269
- 11.6. Percentages of all women in each cohort who are immobile in class VII/IIIb, mobile into VII/IIIb (class VII for men in the USA), and mobile out of VII/IIIb 270
- 11.7. Percentage of people in each educational category in pre-1924 and post-1964 cohorts by gender and country 275
- 11.8. Ratio of percentage class I + II destination to percentage tertiary qualification in pre-1924 and post-1964 cohorts by gender and country 277
