Acknowledgments

Some of the ideas and materials in this book were developed for seminars presented for the State Department in Washington, Manila, and Jakarta, as well as some presented at Allahabad University in India, the Shansi Agricultural College in China, and the University of New England in Armidale, Australia. Some appear in a chapter titled “Malnutrition, Starvation, and Death” (Foster 1991) in the book Horrendous Death, Health and Well-Being. And some were developed for a Distinguished Lecturer Series at South Dakota State University.

But my thinking on this topic was particularly sharpened during the period 1982–1991 by my experiences teaching a class in world hunger, population, and food supplies at the University of Maryland. Interaction with challenging students was invaluable in stimulating my mind and in improving my capacity to present information to others.

I wish to thank so many who have given me advice, encouragement, and assistance in bringing this book to completion. Particular appreciation goes to Lynne Rienner for her encouragement almost from the inception of this work. Per Pinstrup-Andersen, the present director general of the International Food Policy Research Institute (IFPRI), whose seminal work on food policy is cited so liberally in this book, has been another early supporter of this project and offered many helpful comments during his review of the manuscript. Jim Dever, now of the United States Department of Agriculture (USDA), helped greatly in the preparation of Chapters 2, 3, and 4.

Richard Ahrens, Phylis Moser-Veillon, and Steve Read (University of Maryland) stood by ready to answer my never-ending stream of questions on nutrition, as did Richard Erdman from our Animal Science Department, and Julie Kelment of AID. Claire Cassidy instructed me on nutritional anthropology. Kathleen Cravero of the United Nations Children’s Fund reviewed materials on nutrition and health. My son, Dean Foster (University of Chicago), helped both in matters of nutrition and statistics. Richard Ahrens from our Animal Science Department, and Julie Kelment of AID. Claire Cassidy instructed me on nutritional anthropology. Kathleen Cravero of the United Nations Children’s Fund reviewed materials on nutrition and health. My son, Dean Foster (University of Chicago), helped both in matters of nutrition and statistics. Carl Haub of the Population Reference Bureau checked my thinking on demography and supplied much useful information. Throughout the whole process Arthur Dommen of the USDA Economic Research Service, Developing Economies Branch, was ready and willing to supply me with information from the encyclopedic fund of knowledge that he stores in his office or simply carries around in his head.

The sections on economics and public policy benefited from comments and criticisms from Earl Brown, Bruce Gardner, John Horowitz, John Moore, and
Acknowledgments

Jim Russell (all in my department at Maryland). My thinking was frequently influenced by other authors whose material I have discussed with them and quoted in this book. Others who helped in steering me in the right direction include Jock Anderson (World Bank), Dana Dalrymple (USDA/AID), Goeff Edwards (Latrobe University), Brian Hardaker (University of New England), Hope Sukin (State Department), Schlomo Reutlinger (World Bank), Jim Roumasset (East-West Center), Al Thieme (Inter-American Development Bank), and Amanda Wolf (School of Public Affairs, University of Maryland).

The entire book was read and criticized by Arthur Dommen (USDA), Bea Rogers (Tufts), and two anonymous reviewers, all of whom provided much helpful criticism. My wife, Denny, was particularly helpful by insisting that she actually be able to understand everything I said, and her suggestions have been most useful in adding to the readability of the text. Lynn Rodgers, a former student, kindly helped in sharpening concepts and language.

We all owe a debt of gratitude to John Mellor, who encouraged and guided his staff at IFPRI over the 13-year period from 1977 to 1990 during which they produced a wealth of empirical studies that have sharpened the thinking of the entire community of scholars working in the food policy field. I cite, for example, 28 studies published by IFPRI during John’s tenure as director.

Thanks go to Carol Warrington and her staff at the Computer Science Center at the University of Maryland for the preparation of all the figures, to Dianne Walbasser and Lien Trieu for preparing the tables for publication, to Pam Ferdinand for her very careful copyediting, and to Steve Barr for managing the project.

P.F.
