Acknowledgments

Our research benefited from the interest and collaboration of many individuals and institutions. In Kenya, the link with the International Centre for Insect Physiology and Ecology was essential, and we gratefully acknowledge the assistance of Professor Fasil Kiros, Dr. Joseph Ssennyonga, and Mr. Andrew Ngugi. The Intermediate Technology Development Group (ITDG) in Zimbabwe provided a most congenial environment in which to work, and Mr. Kudaakwashe Murwira, Mr. Eddie Dengu, Ms. Monica Nyakuwa, and Mr. Colin Musvita deserve special mention. In Ghana, Dr. Dan Adomako, Dr. Ken Brew, Dr. K. Opoku-Ameyaw, and Mr. Francis Baek of the Cocoa Research Institute of Ghana and Mr. Kevin Gager, Dr. Kevin Waldie, Mr. Paul Amponsah, and Mr. F. W. Haizel-Cobbina of the Wenchi Farm Institute provided access to field sites and valuable feedback on our approach. We are particularly grateful to Dr. Kevin Waldie for his direct and insightful participation in the fieldwork in Brong Ahafo.

We also gratefully acknowledge the support of Ms. Felicity Proctor and Mr. Roger Smith of the Overseas Development Administration (ODA) and Ms. Cathy Watson of ITDG in helping to arrange the field visits. Dr. John Farrington and his colleagues at the Overseas Development Institute managed the grant under which the research was completed.

During the 1993-1994 academic year, students in the University of East Anglia's School of Development Studies' MSc program in Agriculture, Environment, and Development field-tested certain of our ideas about farmers' experimentation, and their patience and insights were most helpful. A number of colleagues commented on early versions of the original research report and manuscript, including Dr. Stephen Biggs, Dr. Arnoud Budelman, Mr. Alwyn Chilvers, Ms. Annika Dahlberg, Dr. Frank Ellis, Dr. David Gibbon, Dr. Elon Gilbert, Dr. Carla Roncoli, and Dr. Charles Staver. Their comments were essential and very much appreciated.

Finally, we are grateful to the many farmers who agreed to talk with us about their farming activities. Their goodwill was the key to the completion of the research.

This research was funded, in part, by the ODA of the United Kingdom. However, the ODA can accept no responsibility for any in-
formation provided or views expressed. That responsibility rests with us alone.
