

Contents

- 1 Introduction — 1**

- 2 Bio-inspired and bio-hybrid materials — 3**
 - 2.1 Biomimetic functional materials — 3
 - 2.2 Protein-based functional materials — 7
 - 2.3 Bioelectronics — 26
 - 2.4 Microorganism-synthesized biomimetic materials — 29

- 3 Biomimetic surfaces — 39**
 - 3.1 Adhesion and wetting — 39
 - 3.2 Color and photonics — 48
 - 3.3 Biosensing — 51
 - 3.4 Cell-surface interactions — 52

- 4 Tissue Engineering — 61**
 - 4.1 Artificial organs — 61
 - 4.2 Tissue engineering — 63
 - 4.2.1 Cell seeding and growth in engineered tissues — 64
 - 4.2.2 TE scaffolds — 65
 - 4.2.3 Tissue-engineered cartilage: a case study — 82
 - 4.3 Tissue engineering and drug design — 86

- 5 Biomineralization — 91**
 - 5.1 Protein- and peptide-associated biomineralization — 92
 - 5.2 Organism-templated biomineralization — 102

- 6 Synthetic biology — 115**
 - 6.1 Synthetic proteins — 116
 - 6.2 Directed evolution — 124
 - 6.3 Protein modeling and synthetic proteins — 129
 - 6.4 Engineered oligonucleotides and synthetic genes — 136
 - 6.5 Synthetic functional biomolecules — 140
 - 6.6 Artificial chromosomes — 143
 - 6.7 Engineered microorganisms — 146

- 7 Artificial cells — 149**
 - 7.1 Biomimetic membranes — 150
 - 7.2 Artificial cell division — 160
 - 7.3 Biomolecules encapsulated in artificial cells — 163
 - 7.4 Artificial replication — 165

8 Drug delivery — 171

9 DNA and RNA nanotechnology — 191

- 9.1 Basics of DNA nanostructures — **191**
- 9.2 DNA origami — **193**
- 9.3 DNA-based advanced materials — **201**
- 9.4 RNA nanostructures — **208**
- 9.5 DNA-based computing — **211**

10 Mimicking biological phenomena and concepts — 215

- 10.1 Catalytic antibodies — **215**
- 10.2 Artificial photosynthesis — **217**
- 10.3 Bio-inspired motors — **221**
- 10.4 Artificial muscles — **224**
- 10.5 Biomimetic pores and channels — **228**
- 10.6 Biomimetic signaling pathways — **231**
- 10.7 Electronic noses — **232**
- 10.8 Neural networks and biologically-inspired computers — **238**
