1 Introduction and overview 1

2 Entrenchment in usage-based theories 4
   2.1 Entrenchment in usage-based constructionist approaches 6
   2.2 Entrenchment and usage-based assumptions about language representation and processing 10
   2.3 Entrenchment in usage-based theories of language acquisition 13
   2.4 Entrenchment in emergentist theories of language phylogeny 15
   2.5 Entrenchment in usage-based theories of language change 17
   2.6 Entrenchment in related frameworks 20
   2.7 Summary and outlook: The epistemological status of entrenchment in usage-based frameworks 23

3 The cognitive realism of usage-based generalizations, with a special focus on the relationship between token frequencies and entrenchment 27
   3.1 The assumed link between collective usage and individual representation 28
   3.2 Against the psychological realism of corpus-derived claims 33
   3.3 In support of the potential psychological realism of corpus-derived claims 44
      3.3.1 Neuroplasticity 44
      3.3.2 Experimental research on token frequency effects in multi-word sequences 47
3.3.3 Psycholinguistic research on the entrenchment of multi-word sequences .... 50
3.3.4 Patholinguistic data showing selective dissociations between holistic versus novel sequences of morphemes .... 52
3.3.5 Neuroimaging studies supporting the idea of a neurocognitive split between holistic and compositional modules .... 57

3.4 Conclusion: Can we reasonably expect corpora to predict entrenchment in the mind? .... 61

4 Operationalizing entrenchment .... 66
4.1 Defining entrenchment .... 67
4.2 Assessing the psychological realism of a statement in experimental terms .... 69
4.3 Sources of inspiration .... 72
4.3.1 Gestalt psychology .... 73
4.3.1.1 Why seek inspiration from non-linguistic lines of research? .... 73
4.3.1.2 What makes a chunk in Gestalt psychology? .... 76
4.3.2 The masked priming paradigm .... 85
4.3.3 Frequency effects in English derivatives .... 93
4.3.4 Parametric studies on word frequency effects .... 101
4.4 Operationalizing Entrenchment .... 104

5 Experimental design .... 109
5.1 Stimuli .... 109
5.1.1 Stimuli for the masked priming fMRI studies .... 109
5.1.1.1 Stimuli for the main conditions .... 109
5.1.1.2 Stimuli for the ‘no’-conditions .... 116
5.1.1.3 Stimuli for the control conditions .... 117
5.1.2 Stimuli for the memory experiment .... 118
5.2 Experimental procedures .... 119
5.2.1 Experimental procedure for the masked priming fMRI studies .... 119
5.2.2 Experimental procedure for the memory task .... 123
6 Behavioural data analysis 124

6.1 Main conditions 124
6.1.1 General method 124
6.1.2 Simple linear mixed-effects regression analyses 124
6.1.3 Multiple mixed-effects regression analyses 132
6.1.3.1 Introductory remarks on methodology 132
6.1.3.2 Multiple regression results for part-to-whole priming 133
6.1.3.3 Multiple regression results for whole-to-part priming 134

6.2 Behavioural analyses for the supplementary experiments 138
6.2.1 Mixed-effects regression analyses for jumbled target priming 138
6.2.2 Behavioural analyses for the comparison with monomorphemic controls 143
6.2.3 Behavioural analyses for the memory task 144

6.3 Conclusions 147

7 Neuroimaging Data Analysis 158

7.1 Introductory remarks 158
7.2 Statistical parametric imaging analysis 159
7.2.1 Imaging parameters 159
7.2.2 fMRI data analysis 160
7.2.3 Preprocessing 160
7.2.4 First-level analysis 160

7.3 Results 161
7.3.1 Second-level analyses 161
7.3.2 Results for the part-to-whole priming task 161
7.3.3 Results for the whole-to-part priming task 169
7.3.4 Results for the jumbled target priming task 174
7.3.5 Conjunction analysis for the main conditions 174

7.4 Conclusion 179
## Contents

8 Summary and conclusion 186

8.1 Summary: Entrenchment in usage-based theories 186
   8.1.1 Research rationale and questions 186
   8.1.2 Operationalizing entrenchment 189
   8.1.3 Behavioural results 191
   8.1.4 fMRI Results 194

8.2 Some further theoretical implications 198

8.3 The corpus-to-cognition principle: Towards more fine-grained correlations between corpus and cognitive data 205

8.4 Outlook 211
