Preface — V

Part	l:	Genera	l part
------	----	--------	--------

Part I	: General part
1	Introduction. How to describe complex processes using simple models: Modelics —— 3
1.1	Modelmodeling — 3
1.2	Top-down and bottom-up —— 4
2	Categorization of models —— 6
2.1	Physical framework of model design —— 6
2.1.1	Models of transport —— 7
2.1.2	The batch reactor —— 8
2.1.3	The continuous stirred-tank reactor —— 8
2.1.4	The plug-flow reactor —— 9
2.1.5	The pulse reactor —— 10
2.2	How to simplify complex models? Principles of simplification —— 10
2.2.1	Physicochemical assumptions of simplification of chemico-mathematical models —— 11
2.3	Mathematical concepts of simplification in chemical kinetics — 15
2.3.1	Mathematical status of the quasi-steady-state (QSS) approximation —— 15
2.3.2	Limits of simplification: optimal model —— 17
Part I	I: Chemical modelics
3	Basic models of chemical kinetics —— 21
3.1	Equations of chemical kinetics and a scheme of parametric analysis —— 21
3.1.1	Experimental background —— 21
3.1.2	Equations of chemical kinetics —— 23
3.1.3	Scheme of parametric analysis —— 25
3.2	Autocatalytic models —— 32
3.2.1	Autocatalytic trigger —— 32
3.2.2	Autocatalytic oscillators —— 34
3.2.3	Association reaction —— 59
3.3	Catalytic schemes of transformations —— 63

3.3.1	Catalytic triggers —— 63
3.3.2	Catalytic oscillators — 72
3.4	Catalytic continuous stirred-tank reactor (CSTR) —— 84
3.4.1	Flow reactor with an autocatalytic trigger — 86
3.4.2	Flow reactor with a catalytic trigger —— 89
3.4.3	Flow reactor with an autocatalytic oscillator —— 93
3.4.4	Flow reactor with a catalytic oscillator —— 93
3.4.5	Kinetic "chaos" induced by noise —— 94
3.5	Two-center mechanisms —— 96
3.5.1	Oscillator-trigger model —— 96
3.5.2	Oscillator–oscillator model —— 99
3.5.3	Model with a step of interaction of centers $Z_1 \rightleftharpoons Z_2$ — 101
3.5.4	Model with a diffusion change of interaction centers — 102
3.6	Simplest models of CO oxidation on platinum —— 106
3.7	Nonideal kinetics —— 113
3.8	Savchenko's model —— 124
3.9	Model of the Belousov–Zhabotinsky reaction —— 130
	Thermokinetic models —— 142
4	
4.1	Continuous stirred-tank reactors (CSTR) —— 142
4.2 4.2.1	Zel'dovich–Semenov model —— 143 Reaction A $ ightarrow$ P —— 144
4.2.1	The oxidation reaction $A + O_2 \rightarrow P - 152$
	Reaction $nA \rightarrow P \longrightarrow 157$
4.2.3	Reaction $A \rightarrow P$ with arbitrary kinetics — 162
4.2.4	•
4.2.5	Semenov diagram as a stability criterion —— 164 Aris–Amundson model —— 168
4.3 4.3.1	Reaction A \rightarrow P — 168
4.3.1	Reaction of the n -th order — 181
4.3.3	The oxidation reaction —— 183
4.3.4	Reaction with arbitrary kinetics —— 186
4.3.5	Andronov–Hopf bifurcations —— 189
4.3.6	Safe and unsafe boundaries of regions of critical phenomena — 194
4.4	Volter–Salnikov model —— 197
4.5	Models of a continuous stirred tank reactor and a tube reactor — 205
4.5.1	Parametric analysis of a dimensional model —— 206
4.5.2	Relation between dimensionless and dimensional models —— 214
4.5.3	Determination of ignition boundaries — 215
4.5.4	Continuous tube reactor — 216
4.6	Combustion model of hydrocarbon mixture —— 218
4.7	Thermocatalytic triggers and oscillators — 228
4.7.1	The Eley–Rideal monomolecular mechanism —— 231

4.7.4 The Langmuir-Hinshelwood Mechanism — 235 4.7.5 Autocatalytic schemes of transformations — 237 4.7.6 Autocatalytic oscillator — 245 4.8 Parallel scheme — 248 4.9 Consistent scheme — 252 4.10 One reversible reaction — 255 4.11 Model of spontaneous combustion of brown-coal dust — 259 4.12 Modeling of the nitration of amyl in a CSTR and a tube reactor — 266 4.12.1 Parametric analysis of the mathematical model of a CSTR — 267 4.12.2 Model of a tube reactor — 272 5 Models of macrokinetics — 281 5.1 Homogeneous-heterogeneous reaction — 282 5.2 Model of an imperfectly stirred continuous reactor — 287 5.3 Dissipative structures on the active surface — 291 5.4 The model of sorption-reaction-diffusion — 299 5.5 Macrokinetics of catalytic reactions on surfaces of various geometries — 307 5.6 Nonlinear interaction between the active surface and bulk of a solid — 311 5.7 Models of wave propagation reactions — 315 5.8 Macroclusters on the catalyst surface at the CO oxidation on Pt — 319 5.9 Model of coking the feed channels of the fuel — 322 Part III: Modelics everywhere 6 Models of population dynamics: "prey-predator" models — 335 6.1.1 Nonlinearity of reproduction — 336 6.1.2 Competition in the prey population — 337 6.1.3 Saturation of the predator — 338 6.1.5 Competition for the predator — 338 6.1.6 Nonlinearity of eating of the prey by the predator and saturation of the predator — 339 6.1.7 Competition of the predator for the prey and saturation of the predator — 340	4.7.2	The Eley-Rideal bimolecular mechanism —— 233
4.7.5 Autocatalytic schemes of transformations — 237 4.7.6 Autocatalytic oscillator — 245 4.8 Parallel scheme — 248 4.9 Consistent scheme — 252 4.10 One reversible reaction — 255 4.11 Model of spontaneous combustion of brown-coal dust — 259 4.12 Modeling of the nitration of amyl in a CSTR and a tube reactor — 266 4.12.1 Parametric analysis of the mathematical model of a CSTR — 267 4.12.2 Model of a tube reactor — 272 5 Models of macrokinetics — 281 5.1 Homogeneous-heterogeneous reaction — 282 5.2 Model of an imperfectly stirred continuous reactor — 287 5.3 Dissipative structures on the active surface — 291 5.4 The model of sorption-reaction-diffusion — 299 5.5 Macrokinetics of catalytic reactions on surfaces of various geometries — 307 5.6 Nonlinear interaction between the active surface and bulk of a solid — 311 5.7 Models of wave propagation reactions — 315 5.8 Macroclusters on the catalyst surface at the CO oxidation on Pt — 319 5.9 Model of coking the feed channels of the fuel — 322 Part III: Modelics everywhere 6 Models of population dynamics: "prey-predator" models — 335 6.1.1 Nonlinearity of reproduction — 336 6.1.2 Competition in the prey population — 337 6.1.3 Saturation of the predator — 337 6.1.4 Competition for the predator — 338 6.1.5 Competition for the predator — 338 6.1.6 Nonlinearity of eating of the prey by the predator and saturation of the predator — 339 6.1.7 Competition of the prey and saturation of the predator — 340 6.1.8 Nonlinearity of reproduction of predator and competition	4.7.3	The linear catalytic cycle —— 235
4.7.6 Autocatalytic oscillator — 245 4.8 Parallel scheme — 248 4.9 Consistent scheme — 252 4.10 One reversible reaction — 255 4.11 Model of spontaneous combustion of brown-coal dust — 259 4.12 Modeling of the nitration of amyl in a CSTR and a tube reactor — 266 4.12.1 Parametric analysis of the mathematical model of a CSTR — 267 4.12.2 Model of a tube reactor — 272 5 Models of macrokinetics — 281 5.1 Homogeneous-heterogeneous reaction — 282 5.2 Model of an imperfectly stirred continuous reactor — 287 5.3 Dissipative structures on the active surface — 291 5.4 The model of sorption-reaction-diffusion — 299 5.5 Macrokinetics of catalytic reactions on surfaces of various geometries — 307 5.6 Nonlinear interaction between the active surface and bulk of a solid — 311 5.7 Models of wave propagation reactions — 315 5.8 Macroclusters on the catalyst surface at the CO oxidation on Pt — 319 5.9 Model of coking the feed channels of the fuel — 322 Part III: Modelics everywhere 6 Models of population dynamics: "prey-predator" models — 335 6.1.1 Nonlinearity of reproduction — 336 6.1.2 Competition in the prey population — 337 6.1.3 Saturation of the predator — 337 6.1.4 Competition for the predator — 337 6.1.5 Competition of the predator — 338 6.1.6 Nonlinearity of eating of the prey by the predator and saturation of the predator — 339 6.1.7 Competition of the prey and saturation of the predator — 340 6.1.8 Nonlinearity of reproduction of predator and competition	4.7.4	The Langmuir-Hinshelwood Mechanism —— 235
4.8 Parallel scheme — 248 4.9 Consistent scheme — 252 4.10 One reversible reaction — 255 4.11 Model of spontaneous combustion of brown-coal dust — 259 4.12 Modeling of the nitration of amyl in a CSTR and a tube reactor — 266 4.12.1 Parametric analysis of the mathematical model of a CSTR — 267 4.12.2 Model of a tube reactor — 272 5 Models of macrokinetics — 281 5.1 Homogeneous—heterogeneous reaction — 282 5.2 Model of an imperfectly stirred continuous reactor — 287 5.3 Dissipative structures on the active surface — 291 5.4 The model of sorption—reaction—diffusion — 299 5.5 Macrokinetics of catalytic reactions on surfaces of various geometries — 307 5.6 Nonlinear interaction between the active surface and bulk of a solid — 311 5.7 Models of wave propagation reactions — 315 5.8 Macroclusters on the catalyst surface at the CO oxidation on Pt — 319 5.9 Model of coking the feed channels of the fuel — 322 Part III: Modelics everywhere 6 Models of population dynamics: "prey—predator" models — 335 6.1.1 Nonlinearity of reproduction — 336 6.1.2 Competition in the prey appulation — 337 6.1.3 Saturation of the predator — 337 6.1.4 Competition for the predator — 338 6.1.5 Competition of the predator — 338 6.1.6 Nonlinearity of eating of the prey by the predator and saturation of the predator — 339 6.1.7 Competition of the predator for the prey and saturation of the predator — 340 6.1.8 Nonlinearity of reproduction of predator and competition	4.7.5	Autocatalytic schemes of transformations —— 237
4.9 Consistent scheme — 252 4.10 One reversible reaction — 255 4.11 Model of spontaneous combustion of brown-coal dust — 259 4.12 Modeling of the nitration of amyl in a CSTR and a tube reactor — 266 4.12.1 Parametric analysis of the mathematical model of a CSTR — 267 4.12.2 Model of a tube reactor — 272 5 Models of macrokinetics — 281 5.1 Homogeneous-heterogeneous reaction — 282 5.2 Model of an imperfectly stirred continuous reactor — 287 5.3 Dissipative structures on the active surface — 291 5.4 The model of sorption-reaction-diffusion — 299 5.5 Macrokinetics of catalytic reactions on surfaces of various geometries — 307 5.6 Nonlinear interaction between the active surface and bulk of a solid — 311 5.7 Models of wave propagation reactions — 315 5.8 Macroclusters on the catalyst surface at the CO oxidation on Pt — 319 5.9 Model of coking the feed channels of the fuel — 322 Part III: Modelics everywhere 6 Models of population dynamics: "prey-predator" models — 335 6.1.1 Nonlinearity of reproduction — 336 6.1.2 Competition in the prey population — 337 6.1.3 Saturation of the predator — 337 6.1.4 Competition for the predator — 338 6.1.5 Competition for the predator — 338 6.1.6 Nonlinearity of eating of the prey by the predator and saturation of the predator — 339 6.1.7 Competition of the predator for the prey and saturation of the predator — 340 6.1.8 Nonlinearity of reproduction of predator and competition	4.7.6	Autocatalytic oscillator —— 245
4.10 One reversible reaction — 255 4.11 Model of spontaneous combustion of brown-coal dust — 259 4.12 Modeling of the nitration of amyl in a CSTR and a tube reactor — 266 4.12.1 Parametric analysis of the mathematical model of a CSTR — 267 4.12.2 Model of a tube reactor — 272 5 Models of macrokinetics — 281 5.1 Homogeneous—heterogeneous reaction — 282 5.2 Model of an imperfectly stirred continuous reactor — 287 5.3 Dissipative structures on the active surface — 291 5.4 The model of sorption—reaction—diffusion — 299 5.5 Macrokinetics of catalytic reactions on surfaces of various geometries — 307 5.6 Nonlinear interaction between the active surface and bulk of a solid — 311 5.7 Models of wave propagation reactions — 315 5.8 Macroclusters on the catalyst surface at the CO oxidation on Pt — 319 5.9 Model of coking the feed channels of the fuel — 322 Part III: Modelics everywhere 6 Models of population dynamics: "prey—predator" models — 335 6.1.1 "Prey—predator" model — 335 6.1.2 Competition in the prey population — 337 6.1.3 Saturation of the predator — 337 6.1.4 Competition for the predator — 338 6.1.5 Competition of the predator — 338 6.1.6 Nonlinearity of eating of the prey by the predator and saturation of the predator — 339 6.1.7 Competition of the predator for the prey and saturation of the predator — 340 6.1.8 Nonlinearity of reproduction of predator and competition	4.8	Parallel scheme —— 248
 Model of spontaneous combustion of brown-coal dust — 259 Modeling of the nitration of amyl in a CSTR and a tube reactor — 266 4.12.1 Parametric analysis of the mathematical model of a CSTR — 267 4.12.2 Model of a tube reactor — 272 Models of macrokinetics — 281 Homogeneous-heterogeneous reaction — 282 Model of an imperfectly stirred continuous reactor — 287 Dissipative structures on the active surface — 291 The model of sorption-reaction-diffusion — 299 Macrokinetics of catalytic reactions on surfaces of various geometries — 307 Nonlinear interaction between the active surface and bulk of a solid — 311 Models of wave propagation reactions — 315 Macroclusters on the catalyst surface at the CO oxidation on Pt — 319 Model of coking the feed channels of the fuel — 322 Part III: Modelics everywhere Models of population dynamics: "prey-predator" models — 335 "Prey-predator" model — 335 Competition in the prey population — 337 Conjuster of the predator — 337 Competition for the predator — 338 Competition of the predator — 338 Competition of the predator — 339 Competition of the predator of the prey by the predator and saturation of the predator — 339 Competition of the predator for the prey and saturation of the predator — 340 Nonlinearity of reproduction of predator and competition 	4.9	Consistent scheme —— 252
4.12 Modeling of the nitration of amyl in a CSTR and a tube reactor — 266 4.12.1 Parametric analysis of the mathematical model of a CSTR — 267 4.12.2 Model of a tube reactor — 272 5 Models of macrokinetics — 281 5.1 Homogeneous—heterogeneous reaction — 282 5.2 Model of an imperfectly stirred continuous reactor — 287 5.3 Dissipative structures on the active surface — 291 5.4 The model of sorption—reaction—diffusion — 299 5.5 Macrokinetics of catalytic reactions on surfaces of various geometries — 307 5.6 Nonlinear interaction between the active surface and bulk of a solid — 311 5.7 Models of wave propagation reactions — 315 5.8 Macroclusters on the catalyst surface at the CO oxidation on Pt — 319 5.9 Model of coking the feed channels of the fuel — 322 Part III: Modelics everywhere 6 Models of population dynamics: "prey—predator" models — 335 6.1.1 Nonlinearity of reproduction — 336 6.1.2 Competition in the prey population — 337 6.1.3 Saturation of the predator — 337 6.1.4 Competition for the predator — 338 6.1.5 Competition of the prey and saturation of the predator — 339 6.1.6 Nonlinearity of eating of the prey by the predator and saturation of the predator — 339 6.1.7 Competition of the predator for the prey and saturation of the predator — 340 6.1.8 Nonlinearity of reproduction of predator and competition	4.10	One reversible reaction —— 255
4.12.1 Parametric analysis of the mathematical model of a CSTR — 267 4.12.2 Model of a tube reactor — 272 5 Models of macrokinetics — 281 5.1 Homogeneous-heterogeneous reaction — 282 5.2 Model of an imperfectly stirred continuous reactor — 287 5.3 Dissipative structures on the active surface — 291 5.4 The model of sorption-reaction-diffusion — 299 5.5 Macrokinetics of catalytic reactions on surfaces of various geometries — 307 5.6 Nonlinear interaction between the active surface and bulk of a solid — 311 5.7 Models of wave propagation reactions — 315 5.8 Macroclusters on the catalyst surface at the CO oxidation on Pt — 319 5.9 Model of coking the feed channels of the fuel — 322 Part III: Modelics everywhere 6 Models of population dynamics: "prey-predator" models — 335 6.1.1 Nonlinearity of reproduction — 336 6.1.2 Competition in the prey population — 337 6.1.3 Saturation of the predator — 337 6.1.4 Competition for the predator — 338 6.1.5 Competition of the prey and saturation of the predator — 338 6.1.6 Nonlinearity of eating of the prey by the predator and saturation of the predator — 339 6.1.7 Competition of the predator for the prey and saturation of the predator — 340 6.1.8 Nonlinearity of reproduction of predator and competition	4.11	Model of spontaneous combustion of brown-coal dust —— 259
Models of macrokinetics — 281 5.1 Homogeneous-heterogeneous reaction — 282 5.2 Model of an imperfectly stirred continuous reactor — 287 5.3 Dissipative structures on the active surface — 291 5.4 The model of sorption-reaction-diffusion — 299 5.5 Macrokinetics of catalytic reactions on surfaces of various geometries — 307 5.6 Nonlinear interaction between the active surface and bulk of a solid — 311 5.7 Models of wave propagation reactions — 315 5.8 Macroclusters on the catalyst surface at the CO oxidation on Pt — 319 5.9 Model of coking the feed channels of the fuel — 322 Part III: Modelics everywhere 6 Models of population dynamics: "prey-predator" models — 335 6.1.1 Nonlinearity of reproduction — 336 6.1.2 Competition in the prey population — 337 6.1.3 Saturation of the predator — 337 6.1.4 Competition for the predator — 338 6.1.5 Competition of the prey and saturation of the predator — 339 6.1.6 Nonlinearity of eating of the prey by the predator and saturation of the predator — 339 6.1.7 Competition of the predator for the prey and saturation of the predator — 340 6.1.8 Nonlinearity of reproduction of predator and competition	4.12	Modeling of the nitration of amyl in a CSTR and a tube reactor —— 266
Models of macrokinetics — 281 Homogeneous-heterogeneous reaction — 282 Model of an imperfectly stirred continuous reactor — 287 Dissipative structures on the active surface — 291 The model of sorption-reaction-diffusion — 299 Macrokinetics of catalytic reactions on surfaces of various geometries — 307 Nonlinear interaction between the active surface and bulk of a solid — 311 Models of wave propagation reactions — 315 Macroclusters on the catalyst surface at the CO oxidation on Pt — 319 Model of coking the feed channels of the fuel — 322 Part III: Modelics everywhere Models of population dynamics: "prey-predator" models — 335 "Prey-predator" model — 335 6.1.1 Nonlinearity of reproduction — 336 6.1.2 Competition in the prey appulation — 337 6.1.3 Saturation of the predator — 337 6.1.4 Competition for the predator — 338 6.1.5 Competition of the prey and saturation of the predator — 339 6.1.6 Nonlinearity of eating of the prey by the predator and saturation of the predator — 339 6.1.7 Competition of the predator for the prey and saturation of the predator — 340 Nonlinearity of reproduction of predator and competition	4.12.1	Parametric analysis of the mathematical model of a CSTR —— 267
5.1 Homogeneous—heterogeneous reaction — 282 5.2 Model of an imperfectly stirred continuous reactor — 287 5.3 Dissipative structures on the active surface — 291 5.4 The model of sorption—reaction—diffusion — 299 5.5 Macrokinetics of catalytic reactions on surfaces of various geometries — 307 5.6 Nonlinear interaction between the active surface and bulk of a solid — 311 5.7 Models of wave propagation reactions — 315 5.8 Macroclusters on the catalyst surface at the CO oxidation on Pt — 319 5.9 Model of coking the feed channels of the fuel — 322 Part III: Modelics everywhere 6 Models of population dynamics: "prey—predator" models — 335 6.1.1 Nonlinearity of reproduction — 336 6.1.2 Competition in the prey population — 337 6.1.3 Saturation of the predator — 337 6.1.4 Competition for the predator — 338 6.1.5 Competition of the prey and saturation of the predator — 338 6.1.6 Nonlinearity of eating of the prey by the predator and saturation of the predator — 339 6.1.7 Competition of the predator for the prey and saturation of the predator — 340 6.1.8 Nonlinearity of reproduction of predator and competition	4.12.2	Model of a tube reactor —— 272
5.2 Model of an imperfectly stirred continuous reactor — 287 5.3 Dissipative structures on the active surface — 291 5.4 The model of sorption-reaction-diffusion — 299 5.5 Macrokinetics of catalytic reactions on surfaces of various geometries — 307 5.6 Nonlinear interaction between the active surface and bulk of a solid — 311 5.7 Models of wave propagation reactions — 315 5.8 Macroclusters on the catalyst surface at the CO oxidation on Pt — 319 5.9 Model of coking the feed channels of the fuel — 322 Part III: Modelics everywhere 6 Models of population dynamics: "prey-predator" models — 335 6.1.1 Nonlinearity of reproduction — 336 6.1.2 Competition in the prey population — 337 6.1.3 Saturation of the predator — 337 6.1.4 Competition for the predator — 338 6.1.5 Competition of the prey and saturation of the predator — 338 6.1.6 Nonlinearity of eating of the prey by the predator and saturation of the predator — 339 6.1.7 Competition of the predator for the prey and saturation of the predator — 340 6.1.8 Nonlinearity of reproduction of predator and competition	5 M	odels of macrokinetics —— 281
5.3 Dissipative structures on the active surface — 291 5.4 The model of sorption-reaction—diffusion — 299 5.5 Macrokinetics of catalytic reactions on surfaces of various geometries — 307 5.6 Nonlinear interaction between the active surface and bulk of a solid — 311 5.7 Models of wave propagation reactions — 315 5.8 Macroclusters on the catalyst surface at the CO oxidation on Pt — 319 5.9 Model of coking the feed channels of the fuel — 322 Part III: Modelics everywhere 6 Models of population dynamics: "prey-predator" models — 335 6.1.1 Nonlinearity of reproduction — 336 6.1.2 Competition in the prey population — 337 6.1.3 Saturation of the predator — 337 6.1.4 Competition for the predator — 338 6.1.5 Competition of the prey and saturation of the predator and saturation of the predator — 339 6.1.7 Competition of the predator for the prey and saturation of the predator — 340 6.1.8 Nonlinearity of reproduction of predator and competition	5.1	Homogeneous-heterogeneous reaction —— 282
The model of sorption-reaction-diffusion — 299 Macrokinetics of catalytic reactions on surfaces of various geometries — 307 Nonlinear interaction between the active surface and bulk of a solid — 311 Models of wave propagation reactions — 315 Macroclusters on the catalyst surface at the CO oxidation on Pt — 319 Model of coking the feed channels of the fuel — 322 Part III: Modelics everywhere Models of population dynamics: "prey-predator" models — 335 "Prey-predator" model — 335 Nonlinearity of reproduction — 336 1.1 Nonlinearity of reproduction — 337 31 Saturation of the predator — 337 1.3 Saturation of the predator — 338 1.4 Competition for the predator — 338 1.5 Competition of the prey and saturation of the predator and saturation of the predator — 339 1.7 Competition of the predator for the prey and saturation of the predator — 340 Nonlinearity of reproduction of predator and competition	5.2	Model of an imperfectly stirred continuous reactor —— 287
5.5 Macrokinetics of catalytic reactions on surfaces of various geometries — 307 5.6 Nonlinear interaction between the active surface and bulk of a solid — 311 5.7 Models of wave propagation reactions — 315 5.8 Macroclusters on the catalyst surface at the CO oxidation on Pt — 319 5.9 Model of coking the feed channels of the fuel — 322 Part III: Modelics everywhere 6 Models of population dynamics: "prey-predator" models — 335 6.1.1 Nonlinearity of reproduction — 336 6.1.2 Competition in the prey population — 337 6.1.3 Saturation of the predator — 337 6.1.4 Competition for the predator — 338 6.1.5 Competition of the prey and saturation of the predator — 338 6.1.6 Nonlinearity of eating of the prey by the predator and saturation of the predator — 339 6.1.7 Competition of the predator for the prey and saturation of the predator — 340 6.1.8 Nonlinearity of reproduction of predator and competition	5.3	Dissipative structures on the active surface —— 291
of various geometries — 307 5.6 Nonlinear interaction between the active surface and bulk of a solid — 311 5.7 Models of wave propagation reactions — 315 5.8 Macroclusters on the catalyst surface at the CO oxidation on Pt — 319 5.9 Model of coking the feed channels of the fuel — 322 Part III: Modelics everywhere 6 Models of population dynamics: "prey-predator" models — 335 6.1 "Prey-predator" model — 335 6.1.1 Nonlinearity of reproduction — 336 6.1.2 Competition in the prey population — 337 6.1.3 Saturation of the predator — 337 6.1.4 Competition for the predator — 338 6.1.5 Competition of the prey and saturation of the predator and saturation of the predator — 339 6.1.6 Nonlinearity of eating of the prey by the predator and saturation of the predator — 339 6.1.7 Competition of the predator for the prey and saturation of the predator — 340 Nonlinearity of reproduction of predator and competition	5.4	The model of sorption-reaction-diffusion —— 299
Nonlinear interaction between the active surface and bulk of a solid — 311 Models of wave propagation reactions — 315 Macroclusters on the catalyst surface at the CO oxidation on Pt — 319 Model of coking the feed channels of the fuel — 322 Part III: Modelics everywhere Models of population dynamics: "prey-predator" models — 335 "Prey-predator" model — 335 Nonlinearity of reproduction — 336 6.1.1 Nonlinearity of reproduction — 337 6.1.2 Competition in the prey population — 337 6.1.3 Saturation of the predator — 337 6.1.4 Competition for the predator — 338 6.1.5 Competition of the prey and saturation of the predator — 338 6.1.6 Nonlinearity of eating of the prey by the predator and saturation of the predator — 339 6.1.7 Competition of the predator for the prey and saturation of the predator — 340 Nonlinearity of reproduction of predator and competition	5.5	Macrokinetics of catalytic reactions on surfaces
