Preface — v

Contributing authors — xv

Susanne Liebner and Christian Knoblauch

**1 Microbial carbon dioxide and methane turnover and the permafrost carbon feedback — 1**

- 1.1 The permafrost carbon feedback — 1
- 1.2 Carbon decomposition and GHG release from thawing permafrost — 3
- 1.3 Microbial consumption of methane in permafrost environments — 7
- 1.4 Temperature response of methane oxidizers — 8
- 1.5 Interaction of methane oxidizers and mosses — 10
- 1.6 Methane oxidation in submarine permafrost — 13
- 1.7 Summary — 16
- References — 18

Rachel Mackelprang, Nesliah Tas and Mark Waldrop

**2 Functional response of microbial communities to permafrost thaw — 27**

- 2.1 Introduction — 27
- 2.2 Activity in permafrost — 28
- 2.3 Response to thaw — 30
- 2.4 Future directions — 35
- References — 36

Rhiannon Mondav

**3 Genomic inventory of permafrost microorganisms — 43**

- 3.1 Introduction — 43
- 3.2 A very recent history — 43
- 3.3 (*Meta*)metagenomics of permafrost — 45
- 3.4 Future directions — 49
- 3.5 Summary — 50
- References — 50

Marcus A. Horn and Stefanie A. Hetz

**4 Microbial nitrogen cycling in permafrost soils: implications for atmospheric chemistry — 53**

- 4.1 Introduction — 53
- 4.2 Microbial processes of the N-cycle — 61
  - 4.2.1 Biological nitrogen fixation (BNF) and associated organisms — 61
  - 4.2.2 Nitrification and associated organisms — 68

- 4.2.3 Dissimilatory nitrate reduction and associated organisms — **76**
- 4.2.4 Anaerobic ammonia oxidation — **86**
- 4.2.5 Ammonification — **88**
- 4.3 Conclusions — **92**
- References — **92**

Dirk Wagner

**5 *Methanosarcina soligelidi* – a multi-resistant archaeon from Siberian permafrost — 113**

- 5.1 Introduction — **113**
- 5.2 Isolation and characterization of *Methanosarcina soligelidi* SMA-21 — **114**
- 5.3 Tolerance of *Methanosarcina soligelidi* against environmental stress — **116**
  - 5.3.1 Response to subfreezing temperatures — **117**
  - 5.3.2 Desiccation tolerance — **119**
  - 5.3.3 Tolerance against salt stress — **122**
  - 5.3.4 Oxygen sensitivity — **124**
  - 5.3.5 Radiation resistance — **125**
- 5.4 Survival of *Methanosarcina soligelidi* under Mars analog conditions – implication for potential life on Mars — **128**
  - 5.4.1 Survival of *Methanosarcina soligelidi* under Martian thermo-physical conditions — **129**
  - 5.4.2 Methane production activity under simulated Martian subsurface conditions — **133**
- 5.5 Conclusion — **134**
  - Acknowledgments — **135**
  - References — **135**

Lada Petrovskaya, Ksenia Novototskaya-Vlasova,  
Anastasia Komolova and Elizaveta Rivkina

**6 Biochemical adaptations to the permafrost environment: lipolytic enzymes from *Psychrobacter cryohalolentis* K5<sup>T</sup> — 141**

- 6.1 Introduction — **141**
- 6.2 *Psychrobacter cryohalolentis* K5<sup>T</sup> and its lipolytic enzymes — **142**
  - 6.2.1 EstPc — **142**
  - 6.2.2 Lip1Pc — **143**
  - 6.2.3 Lip2Pc — **144**
  - 6.2.4 AT877 — **144**
- 6.3 Ecological adaptations of lipolytic enzymes from *P. cryohalolentis* K5<sup>T</sup> — **146**
- 6.4 Conclusions — **148**

Acknowledgments — 149

References — 149

Beat Frey

- 7 Microbial ecology of mountain permafrost: The Alps — 153**
- 7.1 Microbes in alpine permafrost — 153
- 7.2 Climate change in low-latitude permafrost regions — 153
- 7.3 The alpine permafrost microbiome — 155
- 7.3.1 Bacteria — 155
- 7.3.2 Archaea — 157
- 7.3.3 Fungi — 162
- 7.4 Future perspectives — 163
- Acknowledgments — 166
- References — 166

Sizhong Yang

- 8 Microbial ecology of Alpine frozen ground: the Qinghai-Tibet Plateau — 173**
- 8.1 Introduction — 173
- 8.2 Soil organic carbon (SOC) and greenhouse gas (GHG) emission from Tibetan frozen ground — 174
- 8.3 Microbial enumeration in Tibetan permafrost soil — 175
- 8.4 Novel species from the Tibetan frozen ground soils — 175
- 8.4.1 Bacterial isolates — 176
- 8.4.2 Archaeal isolates — 178
- 8.5 Microbial taxonomic composition — 180
- 8.5.1 Bacterial community — 180
- 8.5.2 Methanotrophic community — 181
- 8.5.3 Archaeal community — 181
- 8.5.4 Fungi diversity — 184
- 8.6 Shaping environmental factors — 184
- 8.7 Habitat filtering vs. geographical distance — 186
- 8.8 Microbial response/feedback to climate change — 186
- 8.9 Conclusion and perspectives — 188
- Acknowledgments — 189
- References — 189

Sophie Crevecoeur and Connie Lovejoy

- 9 Microbial assemblies of Arctic freshwater systems — 197**
- 9.1 Characterization of Arctic freshwater systems — 197
- 9.2 Microbial component of the Arctic diversity — 198
- 9.2.1 Bacteria — 199

- 9.2.2 Archaea — 201
- 9.2.3 Protists — 202
- 9.2.4 Viruses — 203
- 9.3 Microbial assembly rules — 204
- 9.4 Microbial biogeography — 204
- 9.5 Environmental control of microbial communities — 206
- 9.6 Impact of climate change — 207
- References — 207

Riitta Nissinen and Manoj Kumar

- 10 Plant-associated microbes in the Arctic — 213**
- 10.1 Arctic vegetation — 213
- 10.2 Plant microbiomes — 214
- 10.3 Plant-associated fungi in the Arctic — 215
- 10.4 Bacterial communities in Arctic plants — 218
- 10.5 Nitrogen-fixing bacteria — 220
- 10.6 Arctic plant microbiomes are endemic to cold climates and show seasonal dynamics — 222
- References — 222

Ewa Ponięcka and Elizabeth A. Bagshaw

- 11 The cryoconite biome — 227**
- 11.1 Cryoconite biota — 227
- 11.1.1 Molecular analysis of biota — 228
- 11.1.2 Photoautotrophs — 229
- 11.1.3 Heterotrophs — 229
- 11.1.4 Anaerobes — 231
- 11.2 Biogeochemistry — 233
- 11.2.1 Nutrients — 233
- 11.2.2 Pollutants — 233
- 11.3 Future — 234
- References — 235

Stefanie Lutz and James A. Bradley

- 12 Glacial surfaces: functions and biogeography — 239**
- 12.1 Introduction — 239
- 12.2 Life on glacial surfaces — 239
- 12.2.1 Supraglacial habitats — 239
- 12.2.2 Prokaryotes — 241
- 12.2.3 Eukaryotes — 241
- 12.2.4 Viruses — 243
- 12.2.5 The biogeography of supraglacial ecosystems — 243

- 12.3 Glacial functions — **244**
- 12.3.1 Carbon and nutrient cycling and export — **244**
- 12.3.2 Albedo and melting — **245**
- 12.3.3 Biotechnology — **245**
- 12.4 Future outlooks — **245**
- 12.4.1 Impact of global climate change on glacier surface functions — **245**
- 12.4.2 Future challenges and questions — **246**
- Acknowledgments — **247**
- References — **247**

James A. Bradley

- 13 Microbial dynamics in forefield soils following glacier retreat — 253**
- 13.1 Introduction — **253**
- 13.2 Soil development following glacier retreat — **253**
- 13.3 Microbial communities in glacier forefield soils — **255**
- 13.4 Microorganisms are drivers of glacier forefield biogeochemical cycles — **256**
- 13.5 Future climate change — **258**
- 13.6 Future challenges — **259**
- Acknowledgments — **261**
- References — **261**

**Index — 265**
