Preface — VII

Preface to the first edition — IX

1 The Poisson integral and Hardy spaces — 1

- 1.1 Preliminaries — 1
- 1.1.1 Green's formulas — 3
- 1.2 The Poisson integral — 5
- 1.2.1 Borel measures and the space h^1 — 6
- 1.3 The spaces h^p and $L^p(\mathbb{T})$ ($p > 1$) — 12
- 1.4 The space h^p ($p < 1$) — 14
- 1.5 Harmonic conjugates — 21
- 1.5.1 Privalov–Plessner's theorem and the Hilbert operator — 22
- 1.6 Hardy spaces: basic properties — 26
- 1.6.1 Radial limits and mean convergence — 28
- 1.6.2 The space H^1 — 31
- 1.7 The Riesz projection theorem — 33
- 1.7.1 Aleksandrov's theorem: $L^p(\mathbb{T}) = H^p(\mathbb{T}) + \overline{H^p(\mathbb{T})}$ — 37
- Further notes and results — 39

2 Subharmonic functions and Hardy spaces — 45

- 2.1 Basic properties of subharmonic functions — 45
- 2.1.1 The maximum principle — 47
- 2.2 Properties of the mean values — 48
- 2.3 The Riesz measure — 52
- 2.3.1 Riesz' representation formula — 53
- 2.4 Factorization theorems — 56
- 2.4.1 Inner–outer factorization — 57
- 2.5 Some sharp inequalities — 59
- 2.6 Hardy–Stein identities — 63
- 2.6.1 Lacunary series — 66
- 2.6.2 Application to absolutely summing operators — 67
- 2.7 The subordination principle — 69
- 2.7.1 Nevanlinna counting function and the subordination principle — 71
- 2.7.2 Composition with inner functions — 74
- 2.7.3 Approximation with inner functions — 78
- 2.8 The theorem of Burkholder, Gundy, and Silverstein — 79
- 2.9 Addendum: Weak Hardy spaces — 82
- Further notes and results — 85

3	Subharmonic behavior and Bergman-type spaces — 93
3.1	Quasilinearly subharmonic functions — 94
3.2	Regularly oscillating functions — 95
3.3	Mixed-norm spaces. Definition and basic properties — 102
3.3.1	Harmonic conjugates and self-conjugate spaces — 112
3.4	Embedding theorems — 113
3.5	Fractional integration — 116
3.6	Reproducing kernels and atomic decomposition — 120
3.6.1	The Coifman–Rochberg theorem — 121
	Further notes and results — 126
4	Mixed-norm spaces with nonstandard weights — 133
4.1	Classes of real functions — 133
4.2	Bergman spaces with rapidly decreasing weights — 136
4.3	Mixed-norm spaces with subnormal weights — 139
4.4	L^q -integrability of power series with positive coefficients — 140
4.5	Lacunary series with complex-valued coefficients — 144
4.5.1	Lacunary series in mixed norm spaces — 146
4.6	Remarks on weights — 147
	Further notes and results — 152
5	Taylor coefficients and maximal functions — 157
5.1	Using Green’s formula — 157
5.2	Using interpolation of operators on H^p — 160
5.2.1	An embedding theorem — 163
5.2.2	The case of monotone coefficients — 168
5.3	Strong convergence in H^1 — 171
5.3.1	Generalization to (C, α) -convergence — 173
5.4	A (C, α) -maximal theorem — 175
	Further notes and results — 177
6	Besov spaces — 181
6.1	Decomposition of Besov spaces: case $1 < p < \infty$ — 181
6.2	A maximal function — 184
6.3	Decomposition of Besov spaces: case $0 < p \leq \infty$ — 187
6.4	Duality in the case $0 < p \leq \infty$ — 189
6.5	Embeddings between Hardy and Besov spaces — 195
6.6	Best approximation by polynomials — 200
6.7	“Normal” Besov spaces — 202
6.7.1	Isomorphisms between Besov spaces — 203
6.8	Inner functions in Besov and Hardy–Sobolev spaces — 205
6.8.1	Approximation of a singular inner function — 206

- 6.8.2 Hardy–Sobolev space $HS_{1/p}^p$ — 211
- 6.8.3 f-property and K-property — 212
- 6.9 Addendum: Radial limits of Hardy–Bloch functions — 213
- Further notes and results — 217

- 7 The dual of H^1 , and some related spaces — 221**
- 7.1 The norms on BMOA — 221
- 7.2 Garsia’s and Fefferman’s theorems — 225
- 7.2.1 Fefferman’s duality theorem — 230
- 7.3 Vanishing mean oscillation — 230
- 7.4 BMOA and $\mathfrak{B}_{1/p}^p$ — 232
- 7.4.1 Tauberian nature of $\mathfrak{B}_{1/p}^p$ — 234
- 7.5 Coefficients of BMOA-functions — 235
- 7.6 The Bloch space — 236
- 7.7 Mean growth of H^p -Bloch functions — 239
- 7.8 Composition operators on \mathfrak{B} and BMOA — 241
- 7.8.1 Composition operators — 241
- 7.8.2 Compact composition operators on BMOA — 243
- 7.8.3 Weighted Bloch spaces — 244
- 7.9 Proof of the bi-Bloch lemma — 251
- 7.10 Addendum: Carleson measures — 254
- Further notes and results — 256

- 8 Lipschitz spaces of first order — 265**
- 8.1 Definitions and basic properties — 265
- 8.2 Lipschitz spaces on the circle and disc — 271
- 8.2.1 Lipschitz spaces of analytic functions — 272
- 8.2.2 Mean Lipschitz spaces — 273
- 8.3 Lipschitz condition for the modulus — 275
- 8.4 Composition operators — 277
- 8.4.1 Mean Lipschitz condition for the class RO — 280
- Further notes and results — 283

- 9 Lipschitz spaces of higher order — 287**
- 9.1 Moduli of smoothness and related spaces — 287
- 9.2 Lipschitz spaces and spaces of harmonic functions — 290
- 9.3 Conjugate functions — 298
- 9.4 Integrated mean Lipschitz spaces — 301
- 9.4.1 Generalized Besov–Lipschitz spaces — 304
- 9.4.2 Radial Lipschitz conditions — 307
- 9.5 The Poisson integral and the moduli of Lipschitz functions — 312

9.5.1	Division and multiplication by inner functions —	317
9.6	Invariant Besov spaces —	320
	Further notes and results —	323
10	Littlewood–Paley theory —	329
10.1	Vector maximal theorems and Calderon’s area theorem —	329
10.2	The Littlewood–Paley g -theorem —	331
10.3	Applications of the (C, m) -maximal theorem —	335
10.4	A generalization of the g -theorem —	340
10.5	A generalized version of the Luzin area theorem —	342
10.6	Littlewood–Paley-type inequalities —	346
10.7	A proof of Calderón’s theorem and generalizations —	351
10.7.1	Hyperbolic Hardy classes —	360
10.8	Integration operators on Hardy spaces —	362
10.8.1	A generalized integration operator —	366
10.9	Addendum: Tents and Triebel–Lizorkin spaces —	370
	Further notes and results —	377
11	One-to-one mappings —	385
11.1	Integral means of univalent functions —	385
11.1.1	Distortion theorems —	386
11.2	Hardy–Prawitz theorem and applications —	389
11.3	A Littlewood–Paley theorem for univalent functions —	393
11.4	Quasiconformal harmonic mappings of the disc —	396
11.4.1	Boundary behavior of QCH homeomorphisms of the disc —	396
11.5	H^p theory of QCH mappings —	404
	Further notes and results —	410
12	Multipliers on H^p, BMOA, and Besov spaces —	417
12.1	Multipliers on abstract spaces —	417
12.1.1	Compact multipliers —	421
12.2	Multipliers for Hardy and Bergman spaces —	422
12.2.1	Multipliers from H^1 to BMOA —	425
12.3	Solid spaces —	427
12.3.1	Solid hull of Hardy spaces ($0 < p < 1$) —	429
12.4	Multipliers between Besov spaces —	431
12.4.1	Monotone multipliers —	434
12.5	Some applications to composition operators —	436
	Further notes and results —	438
13	Decompositions of spaces with subnormal weights and applications —	443

13.1	Decompositions — 443
13.2	Duality — 447
13.2.1	Jackson spaces — 448
13.3	Reformulation of the duality theorems — 450
13.3.1	Duality for Bergman spaces — 453
13.4	Multipliers on spaces with subnormal weights — 455
13.5	Harmonic Besov spaces. Case $0 < p < 1$ — 458
	Further notes and results — 459
A	Quasi-Banach spaces — 461
A.1	Quasi-Banach spaces — 461
A.2	q -Banach envelopes — 462
A.3	The closed graph theorem — 465
A.4	F -spaces — 468
A.4.1	The Nevanlinna class — 468
A.5	The spaces ℓ^p — 469
A.6	Lacunary series in quasi-Banach spaces — 470
A.6.1	L^p -integrability of lacunary series on $(0, 1)$ — 471
	Further notes and results — 472
B	Bounded vector-valued analytic functions — 475
B.1	Some properties of homogeneous spaces — 475
B.2	Subharmonic behavior of $\ F(z)\ _X$ — 482
B.2.1	The Banach envelope of $H^p(X)$, $0 < p < 1$ — 485
B.3	Linear operators on Hardy and Bergman spaces — 487
	Further notes and results — 493
C	Lebesgue spaces: Interpolation and maximal functions — 495
C.1	The Riesz–Thorin theorem — 495
C.2	Weak L^p -spaces and Marcinkiewicz’s theorem — 497
C.3	Classical maximal functions — 501
C.4	The Rademacher functions and Khintchine’s inequality — 507
C.5	Nikishin’s theorem — 509
C.6	Nikishin–Stein’s theorem — 511
C.7	Banach’s principle and the theorem on a. e. convergence — 514
C.8	Vector-valued maximal theorem — 516
	Further notes and results — 517
	Bibliography — 519
	Index — 545
