Acknowledgements

I have had the great fortune of having the support of a wide number of people for this work, which was initially submitted as my doctoral thesis at the Ruhr University Bochum. Firstly, I owe great thanks to my supervisors Albert Newen and Stephen Butterfill. My primary supervisor, Albert Newen, has supported and guided me from the beginning of this project. His passion for research serves as a constant source of inspiration. The advice and critical comments from my second supervisor, Stephen Butterfill, have been invaluable in substantially improving my work. I am very fortunate to have been able to benefit from feedback from two such prominent experts in the field during my doctoral studies.

Before coming to Bochum, I was lucky enough to have some excellent philosophy teachers who inspired me to continue studying philosophy. I thank Lizzie Fricker and Ralph Walker for encouraging me to continue in philosophy and Anita Avramides, who started off my interest in the problem of other minds, thereby setting the foundation of this research.

Many thanks also to Alan Leslie and his lab at Rutgers University, who I visited in my second year of studies. I learned a lot in the discussions at the lab meetings. Alan Leslie was also the one to suggest looking at pretend play, so he had a significant influence in shaping Chapter 6. At this point I must also thank the Research School at the Ruhr University Bochum who funded my research stay at Rutgers University.

I was fortunate to be able to complete my studies in the context of the DFG Funded Research Training Group ‘Situated Cognition’ (GRK-2185/1), which came with the benefit of a ready-made support network of PhDs and Post-Docs. I thank all of them for the comments and discussion at the various RTG workshops. Special thanks go to Beate Krickel for all her work in keeping the RTG running and her advice on life as a PhD student, as well as Elmarie Venter and Matej Kohar for their useful comments on the manuscript and making sure to get me out of the house occasionally while writing the thesis. You are the best office mates I could have asked for.

Thank you also to everyone at the Lehrstuhl for Philosophy of Mind at the Ruhr University Bochum for the many hours of discussion. A special thank you goes to Sabrina Coninx who went above and beyond in reading and commenting on large parts of this thesis. In the course of writing a joint paper with Albert Newen, we have had much discussion about the role of mindreading, which I also benefited from in writing this thesis. I also thank Tetiana Adler, Valerie Zarges, and especially Yasmin Schwetzel for all their kind help and patience with administrative matters.

Throughout my doctoral studies, I have had the opportunity to present my work at a number of workshops and conferences, and benefited from attending the vast number of workshops taking place at the Ruhr University Bochum. I thank the audiences for their feedback and comments.

In the later stages of my studies, I was able to join the D-A-CH project ‘The Structure and Development of Understanding Actions and Reasons’ (NE 576/14–1). In the context of this, I also benefited from the many interesting paper discussions in the “Lesekreis”, as well as their comments on the Situational Mental File Account. I especially thank Josef Perner, Michael Huemer and Martin Doherty for the many discussions of the false belief task and mental files at workshops over the years.

Finally, I owe a very big thanks to my parents, who supported me unconditionally throughout my journey. Not only have they provided a constant source of motivational support, they have also always been willing to read and discuss my work. There would be many more typos and grammatical errors in this work without their help in proofreading this thesis. I would never have reached this point without them. Thank you!
For my parents
