Table of contents

I. V. Ashaev
Priority method in generalized computability 1

D. Cenzer and J. B. Remmel
Polynomial-time versus computable Boolean algebras 15

R. G. Downey and S. Lempp
The proof-theoretic strength of the Dushnik–Miller Theorem for countable linear orders 55

V. S. Harizanov
Effectively nowhere simple relations on computable structures 59

P. G. Hinman
Jump traces with large gaps 71

Sh. Ishmukhametov
Weak recursive degrees and a problem of Spector 81

K. V. Korovin
Compositions of permutations and algorithmic reducibilities 89

M. V. Korovina and O. V. Kudinov
Some properties of majorant-computability 97

A. S. Morozov
Hyperarithmetic functions and algebraicity 115

A. Shlapentokh
Weak presentations of fields not extendible to recursive presentations 131

R. Shore and A. Sorbi
Jumps of $\Sigma^0_2$-high e-degrees and properly $\Sigma^0_2$ e-degrees 157
viii Table of contents

B. Solon
Enumeration reducibility and the problem of the nontotal property of e-degrees 173

V. Solovyev
Algebras of recursive functions 193

Yue Yang
Σ2 Induction and cuppable degrees 215

Open problems 229
