Paul van Staden, University of Pretoria, South Africa
Steve Stern, Bond University, Australia
Jan Vécera, Charles University, Czech Republic
Samuel Ventura, Carnegie Mellon University, USA
Keith Willoughby, University of Saskatchewan, Canada
Abraham Wyner, Wharton School,
University of Pennsylvania, USA

DE GRUYTER
The *Journal of Quantitative Analysis in Sports (JQAS)*, an official journal of the American Statistical Association, publishes timely, high-quality peer-reviewed research on the quantitative aspects of professional and amateur sports, including collegiate and Olympic competition. The scope of application reflects the increasing demand for novel methods to analyze and understand data in the growing field of sports analytics. Articles come from a wide variety of sports and diverse perspectives, and address topics such as game outcome models, measurement and evaluation of player performance, tournament structure, analysis of rules and adjudication, within-game strategy, analysis of sporting technologies, and player and team ranking methods. *JQAS* seeks to publish manuscripts that demonstrate original ways of approaching problems, develop cutting edge methods, and apply innovative thinking to solve difficult challenges in sports contexts. *JQAS* brings together researchers from various disciplines, including statistics, operations research, machine learning, scientific computing, econometrics, and sports management.

All information regarding notes for contributors, subscriptions, Open Access, back volumes and orders is available online at www.degruyter.com/jqas.
