

# LAW AND DEVELOPMENT REVIEW

**EDITOR-IN-CHIEF**

*Yong-Shik Lee*

**DE GRUYTER**

The *Law and Development Review* (LDR) aims to publish top-quality articles on a range of law and development issues as broadly conceived. Since its first publication in 2008, the LDR is the only major international academic journal to address the impact of both domestic and international legal orders on economic and social development. The journal is distinguished from other journals in law and economics and law and society in that its primary focus is the development aspect of international and domestic legal orders.

The unprecedented diversity and quality of its editorial board, as well as its authors, selected from all parts of the developed and developing worlds, creates a truly global forum where voices from both the developing world and the developed world can meet. The Journal aims to help facilitate future global negotiations concerning the economic development of developing countries and sets out future directions for law and development studies. The LDR will be of interest well beyond academia to reach policy makers, government agencies, NGOs, international bodies, and corporations focused on the legal impact of economic development.

The articles are selected by peer-reviewed process. The Journal publishes multiple issues a year, normally one regular issue for which articles are chosen from unsolicited submissions, and one or more special issues on specific theme for which articles are selected from invited submissions. Please note that the articles selected for publication are made available online through ahead of print cache as soon as peer-review process is completed, even before the corresponding issue is formally published. Individual readers may access the articles online free of charge, without the need of paid subscription.

The LDR is sponsored and managed by the Law and Development Institute. For more information please visit the Institute's website: [www.lawanddevelopment.net](http://www.lawanddevelopment.net).

e-ISSN 1943-3867
