DE GRUYTER

MONTE CARLO METHODS AND APPLICATIONS is a quarterly published journal presenting original articles on the theory and applications of Monte Carlo and quasi-Monte Carlo methods. Launched in 1995 the journal covers all stochastic numerics topics with emphasis on the theory of Monte Carlo methods and new applications in all branches of science and technology. The following topics will be covered: theory of Monte Carlo methods, quasi-Monte Carlo methods, integration, boundary value problems for PDE's, numerics of stochastic differential equations, simulation of random variables, stochastic processes and fields, and stochastic models in all fields of applied sciences.

All information regarding notes for contributors, subscriptions, Open access, back volumes and orders is available online at www.degruyter.com/mema.

Contents

Anton A. Antonov, Sergej M. Ermakov
Random cubatures and quasi-Monte Carlo methods — 179

Sergey I. Kabanikhin, Karl K. Sabelfeld, Nikita S. Novikov, Maxim A. Shishlenin
Numerical solution of an inverse problem of coefficient recovering for a wave equation by a stochastic projection methods — 189

Jean-François Bégin, Mylène Bédard, Patrice Gaillardetz
Simulating from the Heston model: A gamma approximation scheme — 205

Yuriy V. Kozachenko, Yuriy Y. Mlavets
Reliability and accuracy in the space $L_p(T)$ for the calculation of integrals depending on a parameter by the Monte Carlo method — 233

Nikolaos Halidias
A new numerical scheme for the CIR process — 245
