Corrigendum to: Mechanical properties and wear-corrosion resistance of a new compound extrusion process for magnesium alloy AZ61

https://doi.org/10.1515/mt-2023-8002

As Figures 5a and c have already been published in other articles, the authors wish to replace them by the following figures:

![Figure 5](image)

**Figure 5**: Worn surface morphology under load 5 N and reciprocating frequency 2 Hz of magnesium alloy made by a) CE process, b) DE process, c) friction coefficients varying with different loads of dry sliding.

The authors would like to apologize for any inconvenience caused.

---
