For the past 3 years, Nanophotonics has offered an authoritative and voice for scholarship on the interaction of light and matter at the nanoscale. To continue its success and critical view I am happy to announce that Nanophotonics will be under new leadership of Dr. Volker Sorger in the leading role of Managing Editor of the international Scientific Editorial Board. In this leading capacity, Dr. Volker Sorger, together with the international Scientific Board comprised of leading authorities and pioneers, will continue Nanophotonics to be the base for transformative discoveries in fundamental and device applications in nanomaterial properties.

As of January 2015, Nanophotonics will fully enter the Open Access model. This encompasses that all published articles will continue to stay freely accessible online, while authors are met with a moderate publishing fee.

Nanophotonics will continue its emphasis with review articles assembling the cross-disciplinary perspectives of world leaders, while expanding its research article focus on the state of the art. On behalf of the Editorial Board of Nanophotonics, I invite you to come aboard as an important contributor to our ever-expanding vision.
