Corrigendum

Kunjumon I. Vadakkan

**Corrigendum to: The functional role of all postsynaptic potentials examined from a first-person frame of reference**

https://doi.org/10.1515/revneuro-2018-0077

The use of “neuronal firing (somatic spike)” throughout the above article refers to the most common occurrence of somatic spike that immediately follows a spike in the initial segment of the axon (axonal spike/axonal action potential). For details see: Bean, B.P. (2007). The action potential in mammalian central neurons. *Nat. Rev. Neurosci.* 8, 451–465.
