DE GRUYTER

RANDOM OPERATORS AND STOCHASTIC EQUATIONS is a quarterly journal publishing peerreviewed, English-language, original and translated articles on the theory of random operators and stochastic analysis.
The majority of the articles is written by authors from the former USSR, but contributions from leading experts from all over the world will be published as well. Although the focus is on theoretical aspects, contributions on physical and technical applications are included in the journal.

All information regarding notes for contributors, subscriptions, Open access, back volumes and orders is available online at www.degruyter.com/rose.

Contents

Aba Diop, Aliou Diop, Jean-François Dupuy
Simultaneous confidence bands in a zero-inflated regression model for binary data —— 85

Brahim Baadi
Reflected BSDEs with two completely separated barriers and regulated trajectories in general filtration —— 97

Anatoliy A. Pogorui, Ramón M. Rodríguez-Dagnino
Stationary density function for a random evolution driven by a Markov-switching Ornstein–Uhlenbeck process with finite velocity —— 113

Meriyam Dassa, Adel Chala
Stochastic maximum principle for optimal control problem under G-expectation utility —— 121

Nguyen Van Thanh, Tran Quoc Tuan
Asymptotic behavior of solutions to the three-dimensional stochastic Leray-α model —— 137

Thi Oanh Le
Square-mean inertial manifolds for stochastic differential equations —— 149
