Contents

Dynamical Systems & Nonlinear Phenomena

Swati Chauhan, Antim Chauhan and Rajan Arora
Study of shocks in a nonideal dusty gas using Maslov, Guderley, and CCW methods for shock exponents — 1067

Rabindrnat Maity and Biswajit Sahu
Nonlinear excitations and dynamic features of dust ion-acoustic waves in a magnetized electron–positron–ion plasma — 1077

Jingwen Zhu, Ranchao Wu and Mengxin Chen
Bifurcation analysis in a predator–prey model with strong Allee effect — 1091

Solid State Physics & Materials Science

Tailoring the optical properties of tin oxide thin films via gamma irradiation — 1133

Hydrodynamics

Constantin Fetecau, Dumitru Vieru, Abdul Rauf and Tahir Mushtaq Qureshi
Mixed initial-boundary value problems describing motions of Maxwell fluids with linear dependence of viscosity on the pressure — 1107

Quantum Theory

Dylan Durieux and Willi-Hans Steeb
Spin coherent states, Bell states, spin Hamilton operators, entanglement, Husimi distribution, uncertainty relation and Bell inequality — 1125

Jingwen Zhu, Ranchao Wu and Mengxin Chen
Bifurcation analysis in a predator–prey model with strong Allee effect — 1091

Thermodynamics & Statistical Physics

Msda Noureen
Impact of partially thermal electrons on the propagation characteristics of extraordinary mode in relativistic regime — 1147

Akira Matsumoto
The first-order phase transition of melting for molecular crystals by Frost–Kalkwarf vapor- and sublimation-pressure equations — 1159

Onno R. Diermann
Mathieu-state reordering in periodic thermodynamics — 1165

Corrigendum

Anupam Bhandari
Corrigendum to: Study of ferrofluid flow and heat transfer between cone and disk — 1175
