ACKNOWLEDGMENTS

The enterprise resulting in the present volume spanned three years and involved the support and dedicated assistance of a wide array of organizations, institutions, and individuals. While space does not permit the enumeration of all to whom we are indebted, some must be identified because of their especially important contributions to the success of the venture.

Conference Organization and Execution

The funding and in-kind support of the following co-sponsors (listed alphabetically) was indispensable to the success of the California Riparian Systems Conference.

Conference Co-sponsors

California Department of Boating and Waterways	Natural Resource Biologists' Association (Friend of the Conference)
California Department of Conservation	Riverlands Council
California Department of Fish and Game	State Water Resources Control Board
California Department of Food and Agriculture	The Reclamation Board
California Department of Forestry	University of California (Davis) Water Resources Center
California Department of Parks and Recreation	US Army Corps of Engineers
California Department of Water Resources	USDA Soil Conservation Service
California Resources Agency	USDI Bureau of Reclamation
Friends of the River	USDI Fish and Wildlife Service
	US Water Resources Council

Their confidence in the value of the enterprise and in our ability to bring it to fruition is deeply appreciated; without their support there could have been neither the conference nor the present volume.

During the year of organization preceeding the conference, day-to-day guidance was provided by the Conference Steering Committee. Committee members served as interested individuals rather than official agency representatives and gave unstintingly of their time and professional expertise as issues of planning and organization were dealt with. They also provided liason with their respective organizations, facilitating involvement and better understanding of the riparian interests and needs of these organizations.

Conference Steering Committee

Dana Abell*	Peter Moyle*
Michael Aceituno*	Anne Sands*
Betty Andrews	Ronald Schultze*
E. Lee Fitzhugh	Kevin Shea*
Randy Gray*	John Speth*
Glen Holstein	Richard Warner (Chairman)*
Joanne Jackson	

* also served as conference session convener

The unwavering commitment to the success of the conference, and the significant professional and personal investments of effort each of these people made toward that end were impressive. Again, the conference could not have succeeded without this invaluable assistance. Some Steering Committee members also served as session conveners. They, and the other session conveners listed below had the important and difficult tasks of helping to formulate and then chairing specific sessions.

Session Conveners

Dana Abell
Mike Aceituno
Harriet Allen
Bertin Anderson
Gary Bullard
James Burns
Mark Capelli
Randy Gray
Bruce Jones
Don Kelley
John Kramer
Philip Meyer

Peter Moyle
Bob Potter
John Renning
Hal Salwasser
Anne Sands
Ronald Schultz
Lauren Scott
Kevin Shea
Kent Smith
John Speth
Charles Van Riper III
Richard Warner

Promotion and execution of the conference itself was undertaken through the auspices of University Extension, University of California, Davis. Bill Hilden, then Assistant Dean for Business and Finance, was a bastion of sympathetic support and guidance. Promotion was handled with creativity and skill by Vicki Hines. Garrett Jones and Extension staff coordinated registration, facilities, and other on-site conference needs.

Betty Brandon and the staff of the USDA Soil Conservation Service Communication Center, Davis, provided unflagging and sympathetic help with various, often urgent, printing projects.

Roberta Walters, then Director of the Davis Art Center, took very able command of the riparian art exhibit and competition. Her professional skill was largely responsible--excepting, of course, the splendid participation of the contributing artists--for the success of that part of the conference.

Field Studies Center staff and interns Barbara Ott, Karin Van Klaveren, and Mary Tappel covered many bases with patience and unfailing good spirits throughout organization and execution of the conference. JoAnn Wildenradt lent her skill and grace as coordinator and hostess for food and drink.

The Present Volume

Bob Hamre, USDA Forest Service, Fort Collins, Colorado, kindly provided editorial counsel and copies of format and protocols used by that organization for manuscript preparation. These were utilized with but few modifications.

The University of California (Davis) Water Resources Center, in addition to being a conference co-sponsor, was responsible for the initial suggestion and the subsequent meetings which led to publication of this volume by the University of California Press. This and other assistance by Herbert Snyder, Otto Helwig, and the Water Resources Center staff is remembered with appreciation.

With very few exceptions, manuscript authors responded with understanding and often with appreciation to our editorial efforts. Their responses encouraged us in our negotiations with the prickly or unresponsive few who objected to proposed modifications of run-on sentences and dangling participles, or who sat in ruminative silence upon our requests for clearer graphics and more complete literature citations.

A significant number of authors also provided page costs to help defray the expense of putting their manuscripts into final camera-ready form. Readers should know of and appreciate--as we do--this additional contribution of the authors to the successful completion of this volume.

The Field Studies Center, Davis, provided overall coordination, logistic support, technical and support staff, office and library facilities, and materials and supplies throughout both phases of the enterprise. The Center also provided computer hardware and software for word processing, as well as secretarial and proofreading staff under the supervision of the assistant editor. Ronnie James, Carol Van Alstine, and Lisa Steinmann contributed patience and good humor as well as word-processing and proofreading skills. Melanie Minor and Nancy Gooch, interns from the University of California, Davis, helped with bibliographies, word processing, and other important chores.

Throughout the enterprise, from initial conference concept to completion of the present volume, colleagues, friends, and family have provided unflagging guidance, support, and encouragement. One spouse and three children in particular made no material contribution, but without their loving understanding and tolerance for thrown-together meals, consultations into the wee hours of the morning, and enforced absences from home to accommodate their wife/mother's bizarre work schedule, we would be laboring still.

Finally, special acknowledgment is due the late A. Starker Leopold, who first called attention to the problem of riparian system decline nearly a decade ago, and who saw more clearly than most the ominous implication of this decline to our fish and wildlife resources. It is an enduring regret of the editors that he did not live to see the publication of this volume, which he so consistently encouraged.

To all those who helped bring this volume to publication, whether mentioned here or not, we express our most sincere thanks.

Richard E. Warner
Editor
Technical Coordinator, California Riparian Systems Conference

Kathleen M. Hendrix
Assistant Editor
Assistant Coordinator, California Riparian Systems Conference
