Acknowledgments

I have benefited from many discussions, both scientific and philosophical, over many years with many colleagues. At the risk of offending others, let me single out John Cherry, Dave McWhorter, Stavros Papadopulos, Tom Maddock, John Bredehoeft, Pat Domenico, Ghislain de Marsily, Steve Gorelick, Frank Schwartz, Nick Johnson, Paul Wither spoon, Stan Feenstra, and Myles Parsons.

The University of British Columbia was my academic home for many years. In the final few years, I worked with a gifted group of colleagues and students on a set of research topics purposely designed to straddle the boundary between the technical and social aspects of environmental decision-making. I learned much from my interactions with Leslie Smith, Joel Massmann, Tony Sperling, Bruce James, and Dan Walker.

I am very appreciative of the encouragement and critical reading that I received from many friends and colleagues on various parts of the book. In particular, thanks go to John Cherry, Tony Hodge, Tom and Meg Brown, Geoff Freeze, and Rick Freeze. Any errors that remain are mine.
The figures were drafted by Gord Hodge with his usual skill.

Much of this book was written during a delightful sojourn at the Polytechnic University in Valencia, Spain, with the encouragement and support of my colleagues there, Jaime Gomez-Hernandez and Andres Sahuquillo.

I also want to thank those who got me involved in many of the sites highlighted in the book, and who educated me in their technical issues and social complexities: Charlie Andrews, Gerry Grizak, Richard Szudy, Fred Wolf, Tom Sale, Terry Foreman, Beth Parker, Gary Costanzo, Dick Jackson, Ted O’Neill, Rolf Bernegger, Mike Brother, Sybil Hatch, Dave Ketcheson, Paul Kaplan, Dave Donohue, Bob Mutch, and Dale Stephenson.

Finally, I appreciate the efforts of my agent, Sheree Bykofsky, on my behalf, and the support and editing skills of Howard Boyer, Jean McAneny, and Bonita Hurd at the University of California Press.
