Since we published the first edition of this book in 2001, the United States has lived through several economic downturns, an outbreak of terrorism, the onset of an epidemic of hate directed against newcomers, especially undocumented Latinos and Middle Eastern people, and a worldwide pandemic. On a more hopeful note, the country elected its first Black president and vice president and enacted a comprehensive health-reform measure providing access to health care for many of the formerly uninsured. Gay rights advanced impressively.

The country’s demography has changed, as well. Latinos, at about 19 percent of the population, are now the largest minority group, having displaced African Americans, who make up about 13 percent. Asian Americans, although smaller numerically, have increased even more rapidly than the other two larger groups. In California, minorities of color together exceed the white population in size, if not yet in influence. Other states are not far behind.

President Barack Obama’s two terms elicited a vigorous response in the formation of the Tea Party movement and later the election of Donald Trump, whose administration saw an upsurge in hate speech, opposition to immigration, and reversal of civil rights gains. Globalization, outsourcing, and
maquiladoras continued to remove tens of thousands of jobs, such that the gap in income and family wealth between the richest few and the rest of society reached one of the highest levels ever. Police profiling and shootings, the war on drugs, and harsh sentencing policies heightened minority miseries and swelled the prison population. As we went to press in mid-2022, many of these problems remain.

Critical race theory has taken note of all these developments. As the reader will see, a new generation of critical race scholars has examined these issues and responded to critics. Employing the same reader-friendly language, absence of buzzwords and jargon, numerous examples, and excerpts from leading court opinions, the fourth edition brings Critical Race Theory: An Introduction up to date. The reader will learn about new areas of scholarship, including studies of policing, sentencing, and incarceration; campus climate; workplace pressures; implicit bias; affirmative action; and race and class. Critical race theory continues to spread to other countries and areas of study, such as sociology, education, philosophy, and religion; and constituencies, such as campus activists. We include new questions for discussion, some of them aimed at posing practical steps that readers can take to advance a progressive race agenda.

NOTE ON BIBLIOGRAPHIC STYLE

We used a modified form of legal (Bluebook) citation style for the items that appear in the Suggested Readings at the end of each chapter. Authors of articles and books appear
first in the citation, followed by the title. For an article in a journal, the volume number appears next, followed by the name of the journal and the first page of the article, ending with the year of publication. Internet cites appear in the familiar form.
