VERSITA

Central European Journal of **Computer Science**

Welcome Message from the Editor-in-Chief

Editorial

On the occasion of the first issue of the Central European Journal of Computer Science (CEJCS) (http://versita.com/cejcs), a new peer-reviewed, online-only journal in Versita's portfolio I extend a warm welcome to the readers and authors. I express my gratitude to the Editorial and Advisory Board Members for their sustained support to make the launch of this new journal possible and their continued advice and feedback. The support of the Board is essential, the input by the Editorial Board is crucial and greatly appreciated, and the overall coordinating role of the Managing Editor has been instrumental to launch and run the journal. The willingness and expertise of the professionals who serve as reviewers are essential to maintaining technical and editorial standards. So it is with great appreciation and gratitude that I offer my thanks to each of the peer reviewers whose efforts help to ensure that this journal becomes one of the promising new Computing journals. In particular, I would like to thank the many contributors, whose trust at the very beginning allows us to move the journal forward. Although located in Central Europe and close to the authors and readers in that region, it is our intention to serve all the Computer Scientists and Engineers throughout the world.

We wish to assist in promoting and exposure of high quality scientific achievements and intellectual input of computer scientists who often have limited access to sophisticated techniques of modern scientific publications. Through the SpringerLink, we will assure state-of-the-art benefits of a modern electronic publication with an intended scope of the journal to cover the broad spectrum of modern computer science. OnlineFirst will offer speedy publication even before an article could be a part of the complete issue. We propose an extremely wide thematic scope including all computing areas of algorithms, complexity theory, artificial intelligence, bioinformatics, networking and security systems, mobile and sensor systems, programming languages, system and software engineering, theoretical foundations of computer science, and green and multicore computing. We believe that these days any single published scientific article becomes an influential piece of work in the scientific community and should be appropriately promoted by its peers.

I heartily believe that we will soon receive a growing number of quality research papers from authors around the world. I hope that our new Central European Journal of Computer Science will expand in the future and we will be able to accommodate the steady influx of manuscripts, assuring progress, high quality and success. I look forward to a successful and rewarding first year of the journal as Editor-in-Chief and welcome any comments or suggestions you might have on how we can continue to improve our journal.

Cincinnati, March 2011

Dharma Prakash Agrawal (dpa@cs.uc.edu)
Editor-in-Chief, Central European Journal of
Computer Science (CEJCS)
