Selected Papers of CHARLES H. BEST

The career of Charles H. Best needs no introduction to medical or lay readers. His great achievements are here signalized in a large and splendid volume which brings together over sixty of his important research papers in the fields of insulin, heparin, and choline. It is fitting that this volume should be produced at a time when the fortieth anniversary of the discovery of insulin is being celebrated. Dr. Best has on this occasion looked back over the record as given in these papers and provided informative and informal bridges between them which place them in historical perspective. All the references in the original papers have been reassembled in a master bibliography which is a new and full storehouse of references.

CHARLES HERBERT BEST (1899–1978), C.B.F., M.D., D.SC., LL.D., F.R.S., was Professor and Head of the Banting and Best Department of Medical Research and the Department of Physiology, University of Toronto, and was co-discoverer of insulin with F.G. Banting in 1921.
Professor C. H. Best and Sir Henry Dale at the opening of the Charles H. Best Institute in 1953.

This book is dedicated to my wife

MARGARET MAHON BEST

who has helped me more than anyone, to all the fine colleagues whose names are mentioned in our joint papers, and to two of these in particular, Professor C. C. Lucas and Dr. Jessie H. Ridout, without whose efficient and unselfish contributions this volume could not have been prepared for publication
