

# Figures and Tables

## Figures

- I.1 The simulation life cycle 7
- 4.1 A model of holistic competence in social work 77
- 7.1 Student perceptions of simulation usefulness for their learning 127
- 8.1 Comparison of solutions for the simulation and known equation 140
- 8.2 Timeline of the Kinetics Simulations and feedback methods in the course 144
- 10.1 Proposed framework for deciding when to and how to develop a socio-scientific simulation 170

## Tables

- 2.1 Survey results from *Brynania* simulation 42
- 7.1 Simulation use modes and the number of PhET sims used in each context during the semester 122
- 8.1 Matrix of course assessments mapped to select course learning objectives and engineering student outcomes 137
- 12.1 Typical cost and design characteristics for simulation centres 198
- 12.2 Future directions for research in simulation-based health professions education 200
- 12.3 Modified hierarchical version of the Kirkpatrick framework for assessing impact of educational intervention 208
- C.1 Approaches to faculty development for simulation 289
