

Acknowledgments

MANY PEOPLE other than the authors contributed to this book directly and indirectly, and all deserve our hearty thanks.

The book was conceived as a way of thanking Valerie Gates for her strong interest in educating the public about wolves and her generous contributions to the International Wolf Center to foster that work; she inspired this project.

Also integral to the whole process were the outline and chapter reviewers. In keeping with science's peer review process, each chapter was critiqued by at least two colleagues. We promised to thank them publicly without indicating what chapter they reviewed, so that their critiques could remain anonymous. Several of the reviewers were themselves authors of other chapters. We very gratefully acknowledge the important contributions of the following reviewers in helping to improve this book: Layne Adams, Cheryl Asa, Warren Ballard, Marc Bekoff, Troy Best, Tim Caro, Bruce Dale, Stephen Forbes, Todd Fuller, Robert Haight, Fred Harrington, Phil Hedrick, David Hunter, Mark Johnson, Jane Packard, Rick Page, Michael Phillips, Douglas Smith, Robert Stephenson, and John Theberge.

Throughout the manuscript preparation process, our editor, Christie Henry, of the University of Chicago Press, was most patient and tolerant. As each new deadline for delivery of the manuscript passed unfulfilled, she understood and never tried to rush us. We suspect that her experience with other such projects served us well. We are most grateful to her.

Many other people contributed to this project. W. A. Fuller translated Russian manuscripts; U. Banasch, D. Dekker, W. A. Fuller, D. Boyd, and H. A. Whitelaw provided valuable editorial reviews of the chapter on wolf relations with non-prey; S. Fritts and M. Jimenez allowed access to their files concerning wolf-bear interactions; and numerous volunteers from the Yellowstone wolf project contributed many observations from the field, especially R. McIntyre and K. Murphy. Kinard Boone prepared the figures for chapter 9. Nick Federoff helped develop the account of the origin and hybridization of the domestic dog. Richard Tedford provided up-to-date information on the early evolution of canids, and David Waddington assisted with statistical analysis for chapter 9. Part of the work in that chapter was supported by U.S. Fish and Wildlife Service grant 1448-40181-98-6-073. Several biologists contributed information to a questionnaire used in chapter 4. Several individuals made outstanding contributions to the red wolf program and deserve specific recognition: Curtis Carley, Warren Parker, John Taylor, Chris Lucash, Michael Morse, Art Beyer, John Windley, and Jennifer Gilbreath.

Last but not least, we appreciate the support of the agencies and institutions that employ us and support and facilitate our work, including the Biological Resources Division of the U.S. Geological Survey, the North Central Research Station, the University of Minnesota, and the University of Rome.

We sincerely thank all of the above.
