

ACKNOWLEDGMENTS

I would first like to express my deepest thanks to my interlocutors in the field of business innovation who let me into their world and were generous with their time. They were willing to answer my questions regardless of how far removed from their practice these questions were. I hope those of them who end up reading this book will recognize themselves in it, especially the complex, multidetermined, and often contradictory subject positions they occupy.

This book took shape during the 2016–2017 academic year when I was a fellow at the Center for Advanced Studies in the Behavioral Science at Stanford University (CASBS). This place proved to be ideal not only because of its location at the center of Silicon Valley, the origin site of many of the discourses and practices that this book analyzes, but also because of the nurturing environment it provided me. This environment consisted of CASBS's amazing natural setting, wonderful staff, and other fellows who spent the academic year with me. Among the latter with whom I had countless enriching conversations, I would like to thank Steven Feld, Miyako Inoue, Zephyr Frank, Cate Zaloom, Tara Behrend, Eric Klinenberg, and Margaret Levi. Special thanks are due to Don Brenneis—a longtime interlocutor—for making Palo Alto a warm and welcoming place.

I am grateful to the people who engaged with my research when I presented it in the departments of anthropology at the University of California, Santa Cruz and San Diego; Yale University; the University of Amsterdam; the University of Pennsylvania; the Department of Archaeology and Near Eastern Cultures at Tel Aviv University; the Department of Social Anthropology at the University of St. Andrews; the Institute for Social and Cultural Anthropology at the Free University in Berlin; and at the annual meetings of the American Anthropological Association and the Society for the So-

cial Studies of Science. I especially want to acknowledge the helpful feedback given in these venues by Niko Besnier, Don Brenneis, Ilana Gershon, John Haviland, Mette High, Paul Kockelman, Paul Manning, Keith Murphy, Katharina Schramm, Lucy Suchman, Greg Urban, and Kathryn Woolard.

Priya Nelson, my editor at the University of Chicago Press, should be thanked for supporting this project and for giving me invaluable stylistic advice that helped breathe life into an initial version of the manuscript that badly needed it. A number of anonymous reviewers for the press provided crucial feedback that helped significantly improve this book.

Related versions of certain portions of this work have been published elsewhere as follows: portions of chapter 1 appeared in "Routinized Business Innovation: An Undertheorized Engine of Cultural Evolution," *American Anthropologist* 117, no. 4 (2015): 679–92; portions of chapter 2 were first published in "Ritual Semiosis in the Business Corporation: Recruitment to Routinized Innovation," *Signs and Society* 3, no. S1 (2015): S13–S40; portions of chapter 4 and the conclusion first appeared in "The Post-it Note Economy: Understanding Post-Fordist Business Innovation through One of Its Key Semiotic Technologies," *Current Anthropology* 57, no. 6 (2016): 732–60; and portions of the introduction were published in "The 'Cool' Organization Man: Incorporating Uncertainty from Jazz Music into the Business World," in *Modes of Uncertainty: Anthropological Cases*, ed. Limor Samimian-Darash and Paul Rabinow (Chicago: University of Chicago Press, 2015), 29–45. I am grateful to the editors and reviewers involved in the production of these publications for their feedback on the arguments developed therein.

The research at the center of this book would not have been possible had it not been for the financial support given to me in the form of a Marie Curie Career Integration Grant from the European Research Council, an Individual Research Grant from the Israel Science Foundation, and a Research Grant from the Shane Center at the Hebrew University.

Lastly, I thank Anneke Beerkens for sharing with me her passion for creativity and for modeling it in her thoughts and existence.
