Preface — v

Contributing authors — xiii

Bartosz Tylkowski, Marta Giamberini and Todd Underiner

1 Photosensitive microcapsules — 1

- 1.1 Introduction — 1
- 1.2 Microcapsules containing carbon nanotubes — 1
- 1.3 Microcapsules containing silver and gold particles — 3
- 1.4 Microcapsules containing titanium dioxide particles — 9
- 1.5 Microcapsules containing photosensitive chromophores in the shell — 10
- 1.6 Acknowledgments — 15
- 1.7 References — 15

Bartosz Tylkowski, Nuno A.G. Bandeira, Krzysztof Artur Bogdanowicz and Marta Giamberini

2 Smart microcapsules based on photo-isomerizable moieties — 19

- 2.1 Introduction — 19
- 2.2 Photoisomerization of azobenzene — 20
- 2.3 UV-sensitive microcapsules based on azobenzene moieties — 23
 - 2.3.1 Liposome microcapsules — 23
 - 2.3.2 Self-assembly microcapsules — 24
 - 2.3.3 Layer-by-layer microcapsules — 26
 - 2.3.4 Interfacial polymerization microcapsules — 31
- 2.4 Acknowledgments — 33
- 2.5 References — 33

Bojana Boh Podgornik and Marica Starešinič

3 Microencapsulation technology and applications in added-value functional textiles — 37

- 3.1 Introduction — 37
 - 3.1.1 Research and development trends — 37
- 3.2 Microencapsulation methods and processes of applying microcapsules to textiles — 38
 - 3.2.1 Microencapsulation methods — 38
 - 3.2.2 Processes of applying microcapsules to textiles — 42
- 3.3 Purposes and release mechanisms of microcapsules in textile products — 43

- 3.4 Applications of microcapsules in textile products — 46
 - 3.4.1 Microencapsulated dyes and pigments for textile dyeing and printing — 46
 - 3.4.2 Textiles with microencapsulated thermochromic materials — 46
 - 3.4.3 Textiles with microencapsulated photochromic materials — 49
 - 3.4.4 Microencapsulated catalysts and enzymes for special textile effects — 49
 - 3.4.5 Textiles with microencapsulated fire retardants — 50
 - 3.4.6 Microencapsulated agents for textile sizing and adhesive bonding — 52
 - 3.4.7 Microencapsulated blowing agents and expandable microcapsules for leather substitutes — 52
 - 3.4.8 Microencapsulation for textile water proofing — 53
 - 3.4.9 Microcapsules in textile softening and antistatic compositions — 53
 - 3.4.10 Microencapsulated ingredients in textile detergents — 53
 - 3.4.10.1 Enzymes — 55
 - 3.4.10.2 Bleaching agents and whiteners — 55
 - 3.4.11 Textiles with microencapsulated fragrances and perfumes — 57
 - 3.4.12 Textiles with microencapsulated animal repellents — 60
 - 3.4.13 Textiles with microencapsulated antimicrobial, disinfectant and deodorant components — 61
 - 3.4.14 Bioactive medical and cosmetic textiles with microencapsulated ingredients — 62
 - 3.4.15 Textile decontaminants, filters and odor absorbers — 63
 - 3.4.16 Textiles for active thermal control — 64
 - 3.4.17 Microcapsules in self-cleaning textiles and self-healing fibers — 67
- 3.5 Concluding remarks — 67
- 3.6 Acknowledgments — 68
- 3.7 References — 69

Cinta Panisello Ilatje, Tania Gumi and Ricard García Valls

4 Emerging application of vanillin microcapsules — 77

- 4.1 Introduction — 77
 - 4.1.1 Vanillin — 77
- 4.2 Properties and applications — 78
- 4.3 Microencapsulation of vanillin — 78
 - 4.3.1 Purpose of vanillin microencapsulation — 78
 - 4.3.2 Materials and methods — 79
- 4.4 Applications — 79
- 4.5 Polysulfone/vanillin microcapsules — 80
 - 4.5.1 Introduction — 80
 - 4.5.2 Preparation methods — 80

- 4.5.3 Materials — 80
- 4.5.4 Methods — 81
- 4.6 Characterization — 82
- 4.6.1 Scanning electron microscopy — 82
- 4.6.2 High performance liquid chromatography — 84
- 4.6.3 Nitrogen adsorption/desorption analysis — 85
- 4.6.4 Differential scanning calorimetry — 86
- 4.7 Antibacterial and aromatic finishing of fabrics — 87
- 4.7.1 Introduction — 87
- 4.7.2 Antibacterial activity — 87
- 4.7.3 Microcapsules adhesion to fabrics — 88
- 4.7.4 Aroma durability — 91
- 4.8 Conclusions — 92
- 4.9 References — 93

Bartosz Tylkowski and Irene Tsibranska

5 Polyphenols encapsulation – application of innovation technologies to improve stability of natural products — 97

- 5.1 Introduction — 97
- 5.1.1 Microencapsulation in the food industry — 97
- 5.2 Polyphenols — 97
- 5.2.1 Phenolic acids — 99
- 5.2.2 Flavonoids — 100
- 5.2.3 Lignans — 101
- 5.2.4 Stilbenes — 102
- 5.3 Encapsulation of polyphenols — 102
- 5.3.1 Improved stability — 103
- 5.4 Controlled release — 104
- 5.4.1 Mechanism of mass transfer and modeling — 107
- 5.5 Conclusions — 109
- 5.6 References — 110

Gaetano Palumbo

6 Smart coatings for corrosion protection by adopting microcapsules — 115

- 6.1 Introduction — 115
- 6.2 Basic principles: electrochemical nature of corrosion — 116
- 6.2.1 Thermodynamics of corrosion — 118
- 6.3 Corrosion protection — 122
- 6.3.1 Cathodic protection — 122
- 6.3.2 Anodic protection — 124
- 6.3.3 Corrosion inhibitors — 124

- 6.3.4 Corrosion protection by coatings — 124
- 6.3.4.1 Metallic coatings — 125
- 6.3.4.2 Organic coating — 126
- 6.4 Smart coatings — 129
- 6.4.1 Self-healing coatings — 132
- 6.4.2 Self-releasing inhibitor coatings — 139
- 6.4.2.1 pH-sensitive self-release microcapsules — 143
- 6.5 Metal/liquid microcapsule composite coatings — 146
- 6.6 Drawbacks — 151
- 6.7 Conclusion — 156
- 6.8 References — 156

Renata Jastrząb

7 Micro and nanocapsules as supports for surface-enhanced Raman spectroscopy (SERS) — 163

- 7.1 Introduction — 163
- 7.2 History — 163
- 7.3 Fundamentals — 164
- 7.4 The electromagnetic enhancement (EM) — 166
- 7.5 The chemical enhancement — 166
- 7.5.1 Effective SERS materials — 167
- 7.6 Application of SERS — 171
- 7.7 References — 178

Leon Marteaux

8 Si-based inorganic microencapsulation — 187

- 8.1 Introduction — 187
- 8.2 Chemistry — 189
- 8.2.1 The water glass process — 189
- 8.3 The sol–gel process — 189
- 8.4 The main structures and their production process — 191
- 8.5 Active-containing silica microsphere: encapsulation of hydrophilic and lipophilic actives — 192
- 8.5.1 Silica microspheres from monoliths — 193
- 8.5.2 Silica microspheres from inverse micelles templating — 194
- 8.5.3 Silica microspheres from W/O emulsions templating — 194
- 8.6 Core-shell micro and nanocapsules from O/W emulsions templating: encapsulation of lipophilic actives — 195
- 8.7 Core-shell micro and nanocapsules from O/W/O emulsions templating: encapsulation of lipophilic actives — 200
- 8.8 Core-shell micro and nanocapsules from W/O/W emulsions templating: encapsulation of hydrophilic actives — 200

8.9	Triggers — 202
8.10	Trigger mechanisms for breaking capsules — 202
8.10.1	Shear — 202
8.10.2	pH > 10 (silica dissolution) — 203
8.10.3	Osmotic pressure — 203
8.11	Specific to core-shell nano and microcapsules — 204
8.11.1	Drying of the microcapsule suspension — 204
8.11.2	Heat — 204
8.11.3	Good solvents — 205
8.11.4	Sonication — 206
8.11.5	Vacuum — 207
8.12	Industrial examples — 207
8.12.1	Core-shell microcapsules from O/W emulsions — 207
8.12.1.1	Sun protection — 207
8.12.2	Construction chemicals — 207
8.12.3	Textiles — 208
8.12.4	Pharmaceuticals — 209
8.13	Core-shell microcapsules from W/O emulsions — 209
8.13.1	Coatings — 209
8.13.2	Fermentation — 210
8.14	Key features of Si-based microcapsules — 210
8.15	Conclusions and perspectives — 210
8.16	References — 213

Index	— 217
