List of Figures and Tables xi
Acknowledgments xv

1. Complexity in Ecological Systems 1
   The Newtonian Paradigm in Physics 2
   Dynamics and Thermodynamics 6
   Emergent Properties 10
   Ecosystems as Complex Adaptive Systems 13

2. Nonlinear Dynamics 17
   The Balance of Nature? 17
   Population Cycles 19
   Catastrophes and Breakpoints 27
   Deterministic Chaos 31
   Evidence of Bifurcations in Nature 34
   Unpredictability and Forecasting 42
   The Ecology of Universality 48
   Evidence of Chaos in Nature 50
   Criticisms of Chaos 58
   Complex Dynamics: The Interplay between Noise and Nonlinearities 61

3. Spatial Self-Organization: From Pattern to Process 65
   Space: The Missing Ingredient 65
   Turing Instabilities 68
   Coupled Map Lattice Models 84
   Looking for Self-Organizing Spatial Patterns in Nature 95
   Dispersal and Complex Dynamics 98
   Spatial Synchrony in Population Cycles 108
   When Is Space Relevant? A Trade-Off between Simplicity and Realism 117
   Coevolution and Diffusion in Phenotype Space 123

4. Scaling and Fractals in Ecology 127
   Scaling and Fractals 127
   Fractal Time Series 137
   Percolation 139
   Nonequilibrium Phase Transitions 144
**CONTENTS**

The Branching Process 146
The Contact Process: Complexity Made Simple 149
Random Walks and Levy Flights in Population Dynamics 151
Percolation and Scaling in Random Graphs 156
Ecological Multifractals 162
Self-Organized Critical Phenomena 165
Complexity from Simplicity 168

5. Habitat Loss and Extinction Thresholds 171
   Habitat Loss and Fragmentation 171
   Extinction Thresholds in Metapopulation Models 173
   Extinction Thresholds in Metacommunity Models 178
   Food Web Structure and Habitat Loss 186
   Percolation in Spatially Explicit Landscapes 191
   Extinction Thresholds in Spatially Explicit Models 195
   Analytical Models of Correlated Landscapes 199
   More Realistic Models of Extinction Thresholds 206

6. Complex Ecosystems: From Species to Networks 215
   Stability and Complexity 215
   N-Species Lotka-Volterra Models 218
   Topological and Dynamic Constraints 223
   Indirect Effects 226
   Keystone Species and Evolutionary Dynamics 231
   Complexity and Fragility in Food Webs 237
   Community Assembly: The Importance of History 251
   Scaling in Ecosystems: A Stochastic Quasi-Neutral Model 254

7. Complexity in Macroevolution 263
   Extinction and Diversification 263
   Internal and External Factors 264
   Scaling in the Fossil Record 270
   Competition and the Fossil Record 276
   Red Queen Dynamics 279
   Evolution on Fitness Landscapes 282
   Extinctions and Coherent Noise 292
   Network Models of Macroevolution 295
   Ecology as It Would Be: Artificial Life 304
   Recovery after Mass Extinction 308
   Implications for Current Ecologies 313
CONTENTS

Appendix 1. Lyapunov Exponents for ID Maps 317
Appendix 2. Renormalization Group Analysis 319
Appendix 3. Stochastic Multispecies Model 321
