

Contents

Preface v

Acknowledgements vi

1 INTRODUCTION 1

A world in a grain of sand; Gases and golf; Micro-states and macro-states; Forces of order; Order v. chaos; Open systems.

PART I

FROM CRYSTALS TO ORGANISMS

2 CRYSTALS 12

Supercooling and supersaturation; Nucleation; Crystal growth; Crystal defects; Dislocation theory of crystal growth; Chemical imperfections; Further reading.

3 SUBCRYSTALS 20

Conformations; Polymer crystals; Polyamino acids; The primary and secondary structures of DNA; RNA; Proteins; Irregular finite subcrystals; On the virtues and difficulties of molecular sockets; Enzymes as excavators; Precision engineering as the key to enzyme success; Allosteric enzymes; Quaternary structure of proteins; Is protein unique?; Further reading.

4 ORGANISMS 51

The genetic theory of organisms; Where are the genes?; The genetic code; The translating machinery; 'The minimum phenotype'; The genetic view of organisms; A gene in a stream?; Further reading.

PART II

ORGANISATION

5 ON BEING ORGANISED 65

Prevalence and organisation; Four aspects of organisation; The inadequacy of negentropy; Hereditary organisation; Biological organisation; Information capacity; An idealised measure of organisation; Complexity of genotype and phenotype; Recapitulation.

6 ON BECOMING ORGANISED 82

'Creative' processes; How to get a monkey to write War and Peace; How to make an enzyme without really knowing what you are doing; How lucky is insulin?; Chance, selection and replication; Corresponding continuity of form and function; Accessible and inaccessible proteins; Would the automotive enzyme finder always come up with the same answer?; Real evolution of proteins and organisms; Mobile landscapes and superlandscapes; Dynamics of a tortoise-blanket-pea system; Further reading.

PART III

THE ORIGIN OF LIFE

7 A QUEST FOR AN EASY LIFE 110

'The facility principle'; Three ideas; Difficulties presented by 'metabolic' and 'genetic' views; Genetic metamorphosis; A possible primitive molecular biology; The story of Sloppy, Sticky, Lumpy and Tough; Catchment areas; Prospects for further evolution; Further reading.

8 GENETIC METAMORPHOSIS 137

Local multiplication of genes; Divergence of gene function; Co-adaptation of genes; Elaboration of a communal phenotype; Gene addition; Establishment of 'heterogenetic' communities; Genetic extension; Genetic modification; Cells; Where are the crystal-gene systems now?; Conclusion.
