Contents

Preface —— V

1 Introduction into MHD turbulence —— 1
1.1 Turbulence around us —— 1
1.2 Kolmogorov scaling —— 4
1.3 Compressible MHD equations and simulated turbulence —— 6
1.4 How MHD cascade is different from hydro cascade? —— 7
1.5 Turbulent dynamo —— 9
1.6 Magnetohydrodynamics and reconnection —— 9
1.7 Observing MHD turbulence —— 10
1.8 Applications of MHD turbulent theory —— 10
1.9 Cosmic ray transport and acceleration —— 11

2 Astrophysical dynamo —— 13
2.1 Nonlinear small-scale dynamo —— 14
2.1.1 Linear growth stage —— 14
2.1.2 Locality of the small-scale dynamo —— 16
2.1.3 Numerical results —— 17
2.1.4 Efficiency of nonlinear dynamo —— 18
2.1.5 Dynamo simulations with intermittent driving —— 19
2.2 Dynamo in galaxy clusters —— 20
2.2.1 Physical conditions in galaxy clusters —— 20
2.2.2 Limitation of dynamo simulations —— 22
2.2.3 Analysis of cluster simulations —— 24
2.2.4 Cluster magnetic fields —— 26

3 Incompressible MHD turbulence —— 29
3.1 Equations of incompressible MHD and conservation laws —— 31
3.2 From weak to strong turbulence —— 33
3.3 Reduced MHD approximation —— 35
3.4 Strong turbulence: phenomenology —— 36
3.4.1 Dissipation scales —— 37
3.4.2 Anisotropy from phenomenological viewpoint —— 37
3.4.3 Modifications of GS95 —— 39
3.5 Anisotropy from Lagrangian viewpoint —— 39
3.6 Parallel spectrum: numerics —— 41
3.7 Parallel spectrum observations versus numerics —— 43
3.8 Statistical indicators of turbulence —— 45
3.9 The scaling convergence argument —— 48

3.10 Numerical studies of the spectral slope — 50
3.11 Dynamic alignment models — 55
3.12 Anisotropy scaling study — 58
3.13 Summary of balanced driven MHD turbulence — 59
3.14 Turbulence driven by external current — 59
3.14.1 MHD equations with external current and conservation laws — 60
3.14.2 Linear and nonlinear stages — 61
3.14.3 Empirical findings — 64
3.14.4 Applications of current driven turbulence to astrophysical systems — 65

4 Imbalanced MHD turbulence — 67
4.1 Theoretical considerations — 69
4.1.1 Lithwick, Goldreich, and Sridhar (2007) model, [295] LGS07 — 70
4.1.2 Beresnyak and Lazarian (2008) model, [30] BL08 — 70
4.1.3 Perez and Boldyrev (2009) model, [356] PB09 — 71
4.2 Empirical study in MHD simulations with stochastic driving — 72
4.2.1 Establishment of the stationary state — 75
4.2.2 Parallel structure function — 76
4.2.3 Spectra and anisotropies — 79
4.2.4 Comparison with models — 84
4.3 Empirical study in reduced MHD simulations with energy-controlled driving — 86
4.3.1 Nonlinear cascading and dissipation rate — 86
4.3.2 Imbalanced spectra — 87
4.3.3 Imbalanced anisotropies — 88

5 Compressibility in MHD turbulence — 91
5.1 Decomposition into fundamental modes — 91
5.2 Other ways of decomposition into fundamental modes — 95
5.3 Decomposition into solenoidal and potential modes — 97
5.4 Density scalings — 98
5.4.1 Theoretical considerations — 99
5.4.2 The code — 100
5.4.3 Results — 101
5.4.4 Implications — 102
5.5 Viscosity-dominated regime of MHD turbulence — 103
5.6 Applying results to collisionless fluids — 106
5.7 Toward understanding of relativistic turbulence — 106
5.7.1 Fully relativistic MHD turbulence — 109
5.7.2 Relativistic compressible turbulence: mode decomposition — 110

6 Intermittency of MHD turbulence — 117
6.1 General considerations — 117
6.2 She–Leveque model of intermittency — 118
6.3 Intermittency of incompressible turbulence — 118
6.4 Intermittency of compressible turbulence — 119
6.5 Intermittency of viscosity-damped turbulence — 121

7 Turbulence and charged particles — 123
7.1 Particle diffusion due to stochastic fields — 124
7.1.1 Richardson's picture of diffusion — 124
7.1.2 Field line diffusion — 125
7.1.3 Limiting cases: very small and very large distances — 126
7.1.4 Intertial range distances – hand-waving derivation — 126
7.1.5 Inertial range distances – Richardson–Alfvén diffusion — 127
7.1.6 Numerical results, asymmetric diffusion — 127
7.1.7 The model of asymmetric diffusion — 130
7.1.8 Implications of asymmetric field line wandering for particle transport — 130
7.2 Turbulence and particle acceleration — 131
7.2.1 Observational evidence for acceleration different from classic DSA — 131
7.2.2 Statistics of general MHD flows and energy transfer — 134
7.2.3 Acceleration by curvature drift — 135
7.2.4 Numerical case study of two types of turbulence — 137
7.2.5 Expected picture for turbulent acceleration in reconnection — 138

8 Reconnection in the presence of MHD turbulence — 141
8.1 The problem of reconnection — 141
8.1.1 Flux freezing and magnetic topology changes — 141
8.1.2 Sweet–Parker model and its generalization to turbulent media — 141
8.1.3 Temporal and spatial Richardson diffusion — 145
8.1.4 Turbulent reconnection and violation of magnetic flux freezing — 145
8.1.5 Turbulent reconnection in compressible media — 145
8.1.6 Turbulent reconnection in partially ionized gas — 146
8.2 Testing turbulent reconnection — 149
8.3 Understanding turbulent relativistic reconnection — 152
8.4 Generation of turbulence by reconnection — 156
8.4.1 Early-time turbulence in the planar current layer — 157
8.4.2 Compressible simulations with inflow and outflow of turbulence in the current layer — 159
8.5 Observational testing of turbulent reconnection — 161
8.5.1 Solar turbulent reconnection — 161

Unauthenticated
Download Date | 2/29/20 9:03 AM

8.5.2 Solar wind, Parker spiral, heliospheric current sheet — 162
8.5.3 Indirect observational evidence — 163
8.5.4 Flares of magnetic reconnection and associated processes — 164
8.6 Comparison of approaches to magnetic reconnection — 165
8.6.1 Turbulent reconnection and numerical simulations — 165
8.6.2 Turbulent reconnection versus tearing reconnection — 166
8.6.3 Turbulent reconnection: 3D reality versus 2D models — 167
8.6.4 Turbulent reconnection versus turbulent resistivity — 168

9 Turbulent transport of magnetic field and heat — 171
9.1 Important motivation: star formation problem — 171
9.2 Diffusion in magnetized turbulent fluid — 173
9.2.1 Physical picture of reconnection diffusion in the absence of gravity — 176
9.2.2 Reconnection diffusion in the presence of gravity — 179
9.3 Reconnection diffusion and the identity of magnetic field lines — 180
9.3.1 Explosive diffusion of magnetic field lines in turbulent flows — 180
9.3.2 Spontaneous stochasticity of magnetic field lines and reconnection diffusion — 183
9.3.3 Reconnection diffusion in partially ionized gas — 184
9.4 Theoretical expectations and numerical simulations of reconnection diffusion — 185
9.4.1 Limitations of numerical simulations — 185
9.4.2 Reconnection diffusion in circumstellar accretion disks — 187
9.5 Predictions and tests for reconnection diffusion — 188
9.5.1 Reconnection diffusion in interstellar diffuse gas — 188
9.5.2 Reconnection diffusion and extreme cases of star formation — 190
9.5.3 Intuitive understanding of reconnection diffusion — 191
9.5.4 Reconnection diffusion and alternative ideas — 192
9.5.5 Transport of heat in magnetized fluid — 194
9.5.6 MHD and plasma-based descriptions of reconnection diffusion — 199

10 Extracting properties of astrophysical turbulence from observations — 203
10.1 Studying turbulence with spectral lines — 204
10.1.1 Statistics of the PPV: velocity channel analysis and velocity coordinate spectrum — 205
10.2 Synchrotron fluctuations — 219
10.2.1 Numerical testing of the synchrotron-based techniques and the application to observations — 225
10.3 Observational signatures of MHD turbulence modes — 226

10.3.1 Anisotropy arising from Alfvenic turbulence: obtaining magnetic field direction and M_A —— **226**
10.3.2 Contribution of different MHD turbulence modes —— **227**
10.4 Relation to CMB foreground studies —— **228**
10.4.1 Polarized CMB foreground —— **228**
10.4.2 MHD turbulence for foreground studies —— **229**
10.5 Gradient technique: utilizing the turbulence knowledge to study magnetic fields —— **235**
10.5.1 Velocity gradients —— **235**
10.5.2 Synchrotron intensity gradients —— **239**
10.5.3 Synchrotron polarization gradients —— **240**
10.5.4 Intensity gradients —— **241**
10.5.5 Dispersion of gradient directions: obtaining magnetization of the media —— **243**
10.5.6 Probing magnetic fields with different types of gradients —— **244**
10.6 Synergy of different approaches —— **245**
