

List of Tables

| | |
|---|------------|
| Table 2.1: The decibel. Approximated relationships for power and amplitude | 23 |
| Table 2.2: Gain and Phase | 33 |
| Table 2.3: Some points of the y_1 and y_2 curves (Fig. 2.15b) | 36 |
| Table 3.1: Levels in a 3-bit resolution converter | 69 |
| Table 3.2: Representation of the signal of Figure 3.15 in decimal and binary codes | 69 |
| Table 3.3: Amount of bits and number of levels | 70 |
| Table 3.4: Bytes, bits and levels | 70 |
| Table 4.1: Gains and standard resistors R_6 | 107 |
| Table 4.2: Characteristics of temperature sensors | 131 |
| Table 4.3: Cell constants and measuring ranges | 142 |
| Table 4.4: Piezoelectric transducers in air | 157 |
| Table 4.5: Synopsis of sensors | 167 |
| Table 5.1: Error for an EMFM | 176 |
| Table 5.2: Units of heat transfer equations | 197 |
| Table 6.1: Direct methods characteristics | 239 |
| Table 8.1: DTS specifications of commercial equipment | 281 |
| Table 8.2: Some Characteristics of two SODAR systems | 292 |
| Table 8.3: The relation between pulse duration and length and spatial resolution | 306 |
| Table 8.4: Examples of pulse repetition rate (prr) | 306 |
| Table 8.5: A commercial lidar for wind farm evaluations | 308 |
| Table 8.6: Another lidar, but for larger range applications | 308 |
| Table 9.1: Lengths and speeds for some serial connections | 340 |
| Table 10.1: Microwave bands | 382 |
| Table 11.1: Steps for a field measuring campaign | 402 |
| Table 11.2: Real change in depth versus measured change | 413 |
| Table 11.3: Real change in depth versus measured change | 413 |
