List of Tables

Table 4.1: Procedural steps for the one-burr-hole approach. —— 35
Table 4.2: PROs and CONs of the one burr hole approach. —— 40
Table 8.1: Invasive cortical stimulation —— 70
Table 9.1: Trigeminal Neuropathic Pain (TNP)* and allied conditions (all M1 ICS) —— 95
Table 9.2: Brachial Plexus Avulsion (all M1 ICS) —— 99
Table 9.3: Post-amputation Phantom Limb (PLP) and Stump (SP) Pain. —— 102
Table 9.4: Postherpetic Neuralgia (PHN) —— 104
Table 9.5: CRPS I & II —— 105
Table 9.6: Miscellaneous PNPs —— 106
Table 10.1: Studies of M1 ICS for PD —— 113
Table 11.1: —— 128
Table 11.2: —— 135
Table 11.3: —— 136
Table 12.1: Studies of Epidural Cortical Stimulation for post-stroke rehabilitation —— 140
Table 13.1: Clinical improvement of tDCS responders (n=15) —— 163
Table 13.2A: Female patient. Bundle of interest statistics (mean and standard deviation): FA (Fractional Anisotropy), l (length), r (fibers density) for Cortico-Spinal Tract (CST), Corpus Callosum (CC) Superior Longitudinal Fasciculus (SLF) at pre and post treatment condition. —— 169
Table 13.2B: Male patient. Bundle of interest statistics (mean and standard deviation): FA (Fractional Anisotropy), l (length), r (fibers density) for Cortico-Spinal Tract (CST), Corpus Callosum (CC) Superior Longitudinal Fasciculus (SLF) at pre and post treatment condition. —— 170
Table 13.3: Magnetic Resonance Spectroscopy * data (male patient) —— 170
Table 14.1: Inclusion Criteria —— 176
Table 14.2: Clinical Outcomes —— 178
Table 14.3: Average HDRS Scores Over Time —— 179
Table 14.4: Selected rTMS Meta-Analyses of High Frequency, Left DLPFC Stimulation —— 184
Table 19.1: Overview of neuroengineering models for cortical stimulation and their applications —— 234
Table 19.2: Comparison of neuroengineering models for cortical stimulation —— 235
Table 19.3: Head parameters used in generating concentric spherical models and 3D realistic head models —— 237
