Contents

Preface —— IX

Introduction —— XI
1 The 8π-problem in the two dimensional case —— **XIV**
2 The parabolic-elliptic Keller–Segel model in higher dimensions —— **XVIII**
3 Chemotaxis models with nonlocal diffusion operators —— **XIX**
4 Notations —— **XX**
5 Preliminaries on semigroups for linear diffusion equations —— **XXI**

1 Local-in-time solutions, small global-in-time solutions —— 1
1.1 Classical Keller–Segel system —— **1**
1.2 Fractional Keller–Segel model and optimal initial data —— **6**
1.3 Singular stationary solution —— **6**
1.4 Local and global solutions with initial data in Morrey space $M^{d/\alpha}(\mathbb{R}^d)$ —— **9**
1.5 Other simple constructions of solutions in nearly optimal spaces —— **13**
1.6 Notes and complements —— **19**

2 Large global-in-time solutions to models of chemotaxis —— 21
2.1 The case of classical diffusion —— **21**
2.2 The case of a nonlocal model of chemotaxis —— **30**
2.3 Statement of results for $\alpha \in (0, 2)$ —— **33**
2.4 Pointwise comparison principle —— **35**
2.5 Averaged comparison principle —— **43**
2.6 Construction of global-in-time solutions for $\alpha \in (0, 1)$ —— **49**
2.7 Construction of the unique global-in-time solutions for $\alpha \in (1, 2)$ —— **55**
2.8 Large global-in-time solutions of the parabolic-parabolic Keller–Segel system on the plane —— **58**
2.9 Comments on special solutions —— **66**

3 Blowups —— 73
3.1 Solutions blowing up in a finite time —— **73**
3.2 A novel approach to blowup and concentration of mass in two dimensions —— **85**
3.3 Proof of blowup of radial solutions —— **89**
3.4 Blowup in the plane $\mathbb{R}^2$ with 8π concentration of mass —— **91**
3.5 Refinements of the proof of blowup of radial solutions in higher dimensions —— **104**
3.6 Blowup of solutions for the two dimensional fractional diffusion Keller–Segel model —— **109**

3.7 Keller–Segel model with chemoattractant consumption terms — 115
3.8 Blowup of radially symmetric solutions, again — 131

4 Blowups à la Fujita — 137
4.1 Fujita's idea of the proof of blowup for the system with the classical diffusion — 137
4.2 Blowup à la Fujita of solutions of system with fractional diffusion — 145

5 Interpretations, complements, conjectures, et cetera — 153
5.1 Dichotomy: local–global existence of solutions — 153
5.2 Further comments on solvability of the classical and fractional Keller–Segel system — 154
5.3 Optimal initial data for two dimensional Keller–Segel system — 157
5.4 Blowup of solutions to a general diffusive aggregation model — 165
5.5 Hypercontractivity of the linearization around the singular solution — 177
5.6 Classical diffusion case: super- and subsolutions — 181
5.7 Miscellanea, questions and conjectures, research plans — 188

Bibliography — 191

Index — 203
