## Contents

**PREFACE** vii  
**ACKNOWLEDGMENTS** ix  

**CHAPTER I. NATIVE ORGAN AND SPECIES RESISTANCE TO TUBERCULOSIS: PRELIMINARY STUDIES** 3  
  - Factors related to organ resistance in different species 4  
    - Deposition of intravenously injected tubercle bacilli and organ resistance 4  
    - Oxygen tension and growth of tubercle bacilli in different organs 5  
    - Granulomatous response to heat-killed tubercle bacilli and organ resistance 6  
  - Fate of tubercle bacilli in organs of rabbits 8  
    - Fate of human and bovine tubercle bacilli 8  
    - Fate of BCG 13  
  - Significance of host responses in relation to fate of tubercle bacilli on first infection in rabbits 15  
    - Initial exudation of polymorphonuclears 16  
    - Mononuclear accumulation 17  
    - Appearance of epithelioid cell tubercles and caseation 18  
    - Advent of lymphocytes, capillary infiltration, and giant cells; resorption of tubercle 19  
    - General correlation between fate of tubercle bacilli and host responses 20  
  - Significance of epithelioid cells and tubercles 23  
  - Significance of giant cells 26  
  - Caseation 27  
  - Conclusions 28  

**CHAPTER II. RESISTANCE TO REINFECTION** 30  
  - Fate of tubercle bacilli in organs of reinfected rabbits 30  
  - Cellular host responses in relation to fate of bacilli of reinfection 34  
  - Cavity formation and continued proliferation of bacilli of primary infection 36  
  - Interpretation and summary 40
CHAPTER III. THE MECHANISM OF IMMUNITY IN TUBERCULOSIS

Cellular and Extracellular Factors

ROLE OF BODY FLUIDS AND CELLULAR FACTORS IN INHIBITION OF GROWTH OF BACILLI OF REINFECTION AND IN THEIR FIXATION AT PORTAL OF ENTRY

ALLERGY AND IMMUNITY IN TUBERCULOSIS

SUMMARY

Cellular Activity and Acquired Resistance

MOBILIZATION OF MONONUCLEAR PHAGOCYTES IN NORMAL AND IMMUNIZED ANIMALS AND THEIR RELATIVE CAPACITIES FOR DIVISION AND PHAGOCYTOSIS

BROADLY SPECIFIC FACTORS IN RESISTANCE TO INFECTION

Tuberculosis and broadly specific factors in resistance

Endotoxins and broadly specific factors in resistance

CHAPTER IV. THE MECHANISM OF IMMUNITY IN TUBERCULOSIS: FATE OF TUBERCLE BACILLI INGESTED BY MONONUCLEAR PHAGOCYTES DERIVED FROM NORMAL AND IMMUNIZED ANIMALS

USE OF ANTERIOR CHAMBER OF EYE OF NORMAL RABBITS FOR DETERMINATION OF FATE OF TUBERCLE BACILLI INGESTED BY NORMAL AND IMMUNE PHAGOCYTES

Fate of tubercle bacilli ingested in vivo by monocytes derived from normal and immunized animals

Fate of tubercle bacilli ingested in vitro by cells derived from normal animals in presence of normal and immune serum

Fate of tubercle bacilli ingested in vitro by cells derived from normal and immunized rabbits in presence of normal serum

Fate of tubercle bacilli ingested in vitro by cells derived from normal and immunized rabbits in presence of immune serum

Summary and discussion

GROWTH OF TUBERCLE BACILLI IN NORMAL AND IMMUNE CELLS CULTURED IN VITRO

PRESERVATION OF CELLULAR INTEGRITY AND CELLULAR RESISTANCE

CELLULAR TRANSFER OF RESISTANCE

TRANSFER FACTOR OF DELAYED SENSITIVITY

NATURE OF DELAYED SENSITIVITY AND HUMORAL ANTIBODY FORMATION

DELAYED SENSITIVITY AND AGAMMAGLOBULINEMIA

CELLULAR RESPONSE TO ANTIGEN IN DELAYED SENSITIVITY

ALTERATION OF CELLULAR ACTIVITY IN DELAYED SENSITIVITY

CONCLUSIONS
## CONTENTS

### CHAPTER V. EFFICACY OF ACQUIRED AND NATIVE RESISTANCE IN CONTACT TUBERCULOSIS OF NON-INBRED RABBITS

- Method of Natural Contagion
  - Results
- Incidence, Mortality, and Route of Infection
- Portal of Entry of the Disease
- Extent and Character of the Disease
- Summary and Conclusions

### CHAPTER VI. HEREDITY, CONSTITUTION, AND TUBERCULOSIS: AN EXPERIMENTAL STUDY

- On the Nature of Native Resistance to Tuberculosis
  - Heredity and Resistance to Tuberculosis: Historical Background
  - The Rabbit Families
  - Native Resistance and Natural Respiratory Contagion
    - Methods of testing resistance to tuberculosis
  - Experimental Results
    - Pathogenesis of the disease in the A family
    - Pathogenesis of the disease in the F and C families
    - Pathogenesis of the disease in the B and D families
    - Microscopic character of the disease in these five families
    - Summary of pathogenesis of tuberculosis in the different families
  - Inherited Native Resistance to Artificial Tuberculous Infection
    - Quantitative natural respiratory contagion of tuberculosis
      - Method
      - Apparatus for quantitative airborne infection
      - Preparation of suspension for atomization
      - Air-sampling devices
      - Accuracy of estimate of number of bacilli inhaled
      - Number and size of inhaled droplet nuclei of human and bovine tubercle bacilli required to generate single primary pulmonary focus
      - Genetic resistance to tuberculosis as measured by quantitative airborne contagion
  - Experimental Study of Factors in Hereditary Constitutional Resistance to Tuberculosis
    - Relative resistance of families to intracutaneous inoculation of bovine bacilli
    - Resistance and permeability of connective tissue: Spread of India ink
    - Allergic sensitivity, antibody formation, and resistance
CONTENTS

Resistance and development of immunity at portal of entry 153
Dissemination of the disease from portal of entry 156
Gross and microscopic character of the disease 157
Summary of factors related to resistance 159

Native Resistance to Tuberculosis and Its Relation to Genetic
Determinants of Defensive Mechanisms in Other Infections 159

PREVENTION OF NATURAL AIRBORNE CONTAGION OF TUBERCULOSIS IN
RABBITS BY ULTRAVIOLET IRRADIATION 160
Experimental results 162

HEREDITARY RESISTANCE TO INCEPTION OF INFECTION CAUSED BY
NATURAL AIRBORNE TUBERCULOSIS CONTAGION AND TO
PROGRESSION OF ENSUING DISEASE 164
Explanation of the discrepancy 167

EFFECT OF VARYING INTENSITY OF NATURAL AIRBORNE CONTAGION ON
INCIDENCE, RAPIDITY OF INCEPTION, AND TYPE OF DISEASE
ACQUIRED BY RABBITS OF HIGH AND LOW NATIVE RESISTANCE TO
TUBERCULOSIS 168

PRELIMINARY CONCLUSIONS 172

DISCUSSION OF LATER LITERATURE ON GENETIC RESISTANCE TO
TUBERCULOSIS AND OTHER INFECTIONS 172
Genetic resistance to tuberculosis: Work of Diehl and others 172
Genetic resistance to other infections: Work of Gowen and
others 175

Summary and Conclusions 177

RESISTANCE TO TUBERCULOSIS AND GENETIC CONSTITUTION 177

METHODS OF MEASURING RESISTANCE 177

NATURE OF GENETIC RESISTANCE TO TUBERCULOSIS AS REFLECTED
IN PATHOGENESIS OF THE DISEASE IN RESISTANT AND SUSCEPTIBLE
ANIMALS 178

VACCINATION AND NATIVE RESISTANCE 179

RESISTANCE TO INCEPTION OF THE DISEASE AND TO ITS PROGRESSION
DETERMINANTS OF NATIVE RESISTANCE 179

CHAPTER VII. ROLE OF SEX HORMONES IN NATIVE
RESISTANCE 180

EFFECT OF ESTROGEN AND CHORIONIC GONADOTROPIN ON
INTRACUTANEOUS INFECTION OF INBRED FEMALE RABBITS 182

MODE OF ACTION OF SEX HORMONES ON RESISTANCE 185
Estrogen, allergic sensitivity, and antibody formation 185
Estrogen and multiplication of bacilli in tissues 186
Role of adrenals in estrogen treatment 187
Effect of estrogen and gonadotropin on connective tissue and
capillary permeability 187
Amyloid degeneration and estrogen treatment 189

DISCUSSION 189

SUMMARY 191
CHAPTER VIII. HOST-PARASITE RELATIONS IN NATIVELY RESISTANT AND SUSCEPTIBLE RABBITS ON QUANTITATIVE INHALATION OF HUMAN AND BOVINE TUBERCLE BACILLI, AND NATURE OF GENETIC RESISTANCE TO TUBERCULOSIS

PRELIMINARY STUDIES ON RESPONSE OF GENETICALLY RESISTANT AND SUSCEPTIBLE RABBITS TO QUANTITATIVE INHALATION OF HUMAN TUBERCLE BACILLI

Rabbit strains

192

All-or-none response of certain genetically resistant and susceptible rabbits to quantitative inhalation of limited numbers of human tubercle bacilli

193

Preliminary data on fate of inhaled human bacilli and on development of allergic sensitivity and antibodies in natively resistant and susceptible rabbits

194

Number of inhaled human tubercle bacilli required to generate a single primary pulmonary focus as index of native resistance to bovine tuberculosis

195

Tubercle formation and genotypic virulence of human tubercle bacilli

198

HOST-PARASITE RELATIONS IN NATIVELY RESISTANT AND SUSCEPTIBLE RABBITS ON QUANTITATIVE INHALATION OF HUMAN BACILLI

Accumulation of quantitatively inhaled human bacilli in lungs of susceptible and resistant rabbits

199

Transport of bacilli from portal of entry to draining lymph nodes and internal organs in resistant and susceptible rabbits

203

Tissue responses in susceptible and resistant rabbits

206

ULTIMATE FATE OF QUANTITATIVELY INHALED HUMAN TUBERCLE BACILLI AND ASSOCIATED TISSUE RESPONSES IN NATIVELY RESISTANT AND SUSCEPTIBLE RABBITS

210

HOST-PARASITE RELATIONS IN NATIVELY RESISTANT AND SUSCEPTIBLE RABBITS ON QUANTITATIVE INHALATION OF BOVINE TUBERCLE BACILLI

Relative retention of inhaled droplet nuclei of tubercle bacilli by lung of natively resistant and susceptible rabbits

212

Relative inactivation of human and bovine bacilli in lungs of natively resistant and susceptible rabbits during lag phase of growth, and its significance

215

Similarities and differences in accumulation of human and bovine bacilli in lungs of resistant and susceptible rabbits, and their significance for pathogenesis of the respective diseases

216

Transport of bovine bacilli from portal of entry in resistant and susceptible rabbits, and their fate in respective metastatic foci

217

Acquired resistance to tuberculosis as specific increment of native resistance

218

SUMMARY
CHAPTER IX. RESPONSE OF SUSCEPTIBLE AND RESISTANT RABBITS TO INTRACUTANEOUS INOCULATION OF BCG, AND EFFECT OF BCG VACCINATION ON RESISTANCE ACQUIRED BY THESE RABBITS

RATE OF GROWTH AND HEALING OF BCG NODULE AND CONCOMITANT DEVELOPMENT OF ALLERGY IN RESISTANT AND SUSCEPTIBLE RABBITS 223

DEGREE OF RESISTANCE TO VIRULENT BOVINE BACILLI AFFORDED RABBITS OF DIFFERENT GENETIC RESISTANCE FOLLOWING A SINGLE BCG VACCINATION 224

DEGREE OF RESISTANCE TO QUANTITATIVE INHALATION OF HUMAN TUBERCLE BACILLI AFFORDED RABBITS OF DIFFERENT GENETIC RESISTANCE BY A SINGLE BCG VACCINATION 225

RATE OF GROWTH AND DESTRUCTION OF BCG AND THE ASSOCIATED HISTOLOGICAL CHANGES IN SKIN OF RESISTANT AND SUSCEPTIBLE RABBITS 226

DISCUSSION 232

SUMMARY 234

CHAPTER X. MODE OF INHERITANCE OF GENETIC RESISTANCE TO TUBERCULOSIS 236

MULTIFACTORIAL DETERMINANTS OF GENETIC RESISTANCE 236

QUANTITATIVE METHOD OF MEASURING NATIVE RESISTANCE 236

RESISTANCE OF F1 HYBRIDS OF SUSCEPTIBLE AND RESISTANT STRAINS 237

RESISTANCE OF BACKCROSSES OF F1 HYBRIDS TO SUSCEPTIBLE AND RESISTANT STRAINS 239

RESISTANCE OF HYBRIDS OF SUSCEPTIBLE STRAINS 240

SUMMARY 242

CHAPTER XI. ROLE OF ADRENAL CORTEX IN NATIVE RESISTANCE TO TUBERCULOSIS 244

EFFECT OF CORTISONE AND ACTH ON PATHOGENESIS OF TUBERCULOSIS 245

Effect of cortisone administration on pathogenesis of tuberculosis in susceptible and resistant strains on quantitative inhalation of human tubercle bacilli 246

Effect of cortisone administration on pathogenesis of tuberculosis on quantitative inhalation of virulent bovine bacilli 251

Effect of ACTH on tuberculosis of FC (s) and C (s) rabbits 253

Antidendotoxin effect of cortisone and corticotropin (ACTH) 254

MODE OF ACTION OF CORTISONE AND CORTICOTROPIN ON RESISTANCE TO INFECTION 254

Brief outline of essential homeostatic actions of adrenocortical hormones 254

Possible mechanisms by which excess steroids reduce native resistance to tuberculosis 257

SUMMARY 261
CHAPTER XII. ROLE OF THE THYROID IN NATIVE RESISTANCE TO TUBERCULOSIS

EFFECT OF HYPERTHYROIDISM

Preliminary studies on effect of triiodothyronine and propylthiouracil on native resistance to tuberculosis 266
Effect of L-triiodothyronine and L-thyroxin on pathogenesis of tuberculosis in different strains of inbred rabbits 269
Effect of L-triiodothyronine on growth of human bacilli in lungs, their spread to draining lymph nodes, and extent of resulting tuberculosis in AD (i) rabbits of intermediate native resistance 269
Effect of triiodothyronine on already existing tuberculosis 271
Effect of triiodothyronine on genetically very susceptible and very resistant rabbits 273
Effect of L-thyroxin on native resistance 273

Summary 278

EFFECT OF HYPOTHYROIDISM 279

Effect of thyroidectomy in TA (i) rabbits 280
Effect of thyroidectomy or propylthiouracil treatment in CAC (s) rabbits 283
Effect of thyroidectomy on native and acquired resistance to tuberculosis in strain III (r) rabbits 285

MODE OF ACTION OF THYROID HORMONES ON RESISTANCE TO TUBERCULOSIS 289

Pathological and immunological relations 289
B.M.R., hyperplasia of the thyroid, and resistance 289
Thyroid hormones, allergic sensitivity, and inflammatory irritability 291
Cellular activity, antibody formation, and thyroid hormones 291

Brief outline of related endocrine actions of thyroid hormones 292
Synthesis, release, and transport of thyroid hormones 293
Regulation of thyroid hormone secretion and utilization 294
Peripheral actions of thyroid hormones which bear on their effects on resistance to tuberculosis 294
Extrathyroid effects of thyrotropin and inflammation 296

SUMMARY AND EVALUATION 296

CHAPTER XIII. CORRELATION OF SOME METABOLIC AND HYDROLYTIC ENZYME ACTIVITIES OF MONONUCLEAR PHAGOCYTES WITH NATIVE AND ACQUIRED RESISTANCE 302

METABOLIC ACTIVITIES OF MONONUCLEAR PHAGOCYTES DERIVED FROM NORMAL NATIVELY RESISTANT AND SUSCEPTIBLE RABBITS 303

EFFECT OF BCG VACCINATION ON METABOLIC ACTIVITY OF MONONUCLEAR PHAGOCYTES 305
CONTENTS

CORRELATION OF BIPHASIC METABOLIC RESPONSE TO BCG VACCINATION WITH BIPHASIC RESPONSE IN RESISTANCE TO TUBERCULOSIS IN INBRED RABBITS 310

EFFECT OF THYROID FUNCTION AND CORTISONE ADMINISTRATION ON SOME METABOLIC FUNCTIONS OF MONONUCLEAR PHAGOCYTES AND ON THEIR MOBILIZATION 314

Effect of thyroid function and cortisone 315

The lysosomes and their stability 317

SOME HYDROLYTIC ACTIVITIES OF MONONUCLEAR PHAGOCYTES OF NORMAL AND TUBERCULOUS NATIVELY RESISTANT AND SUSCEPTIBLE RABBITS 321

Hydrolytic enzymes in mononuclear phagocytes 321

Enzymatic and metabolic adaptations in animals 322

Relation between some hydrolytic enzymes of mononuclears and native and acquired resistance 323

Discussion 324

SUMMARY 325

CHAPTER XIV. COMMON DENOMINATORS IN RESISTANCE TO TUBERCULOSIS AND TO OTHER DISEASES 330

NATIVE RESISTANCE TO TUBERCULOSIS AND RESPONSE TO INTRADERMAL VACCINIA VIRUS INFECTION IN INBRED RABBITS 330

NATIVE RESISTANCE TO TUBERCULOSIS AND PREVALENCE OF SPONTANEOUS UTERINE ADENOCARCINOMA IN INBRED RABBITS 331

CHAPTER XV. RECAPITULATION AND INTEGRATION 337

ORGAN AND SPECIES RESISTANCE 337

FATE OF LIVING TUBERCLE BACILLI OF VARYING VIRULENCE FOR THE RABBIT 337

HOST-PARASITE RELATIONS ON PRIMARY INFECTION 338

HOST-PARASITE RELATIONS ON REINFECTION 339

MECHANISMS OF ACQUIRED RESISTANCE 339

ROLE OF BROADLY SPECIFIC FACTORS IN RESISTANCE TO TUBERCULOSIS 340

BACTERIOSTATIC PROPERTIES OF NORMAL AND IMMUNE PHAGOCYTES IN VITRO 341

EFFICACY OF NATIVE AND ACQUIRED RESISTANCE TO NATURAL CONTAGION 341

HEREDITY, CONSTITUTION, AND TUBERCULOSIS 342

SEX HORMONES AND NATIVE RESISTANCE 343

HOST-PARASITE RELATIONS IN RESISTANT AND SUSCEPTIBLE RABBITS ON QUANTITATIVE INHALATION OF TUBERCLE BACILLI 344

FATE OF QUANTITATIVELY INHALED TUBERCLE BACILLI IN RESISTANT AND SUSCEPTIBLE RABBITS 345

TRANSPORT OF BACILLI FROM PORTAL OF ENTRY 345

EFFECT OF CORTISONE AND THYROID FUNCTION ON NATIVE RESISTANCE 346
CONTENTS

METABOLIC AND HYDROLYTIC ENZYMES OF MONONUCLEAR PHAGOCYTES AND THEIR RELATION TO NATIVE AND ACQUIRED RESISTANCE 347

COMMON DENOMINATORS BETWEEN RESISTANCE TO TUBERCULOSIS AND TO OTHER DISEASES 350

BIBLIOGRAPHY 352

INDEX 378
