Corrigendum to: Validation of a pneumatic tube system to transport surgical pathology biopsy samples

https://doi.org/10.1515/cclm-2017-1012

No significant difference was observed between immediately frozen and delayed frozen biopsy samples transported in wet compresses in our study. Unfortunately, Figure 2 contains an erroneous p-value. The correct p-value for the comparison between immediately frozen and delayed frozen samples transported in wet compresses is $p = 0.56$ (see the corrected Figure 2).
