Universal algebra, quasigroups and related systems	1-5
G.H. BORDALO: Frattini extensions of unary algebras	7-14
Thomas IHRINGER: Multiplication groups of quasigroups: Elementary combinatorics	15-26
A.D. KEEDWELL: Proper loops of order n in which each non-identity element has left order n	27-33
Dušan KOLLÁR, Robert ŠULKA: On some closure operators on semigroups . .	35-45
Antoni CHRONOWSKI: Decompositions and extensions of homomorphisms of n -groups	47-53
Elena BROŽIKOVÁ: Universal identities over an orthogonal system of quasigroups	55-62
Norbert ENDRES: Group related symmetric groupoids	63-74
Wiesław A. DUDEK: Unipotent n -ary groups	75-81
K.W. JOHNSON: Some recent results on quasigroup determinants	83-93
Janusz A. POMYKAŁA: Some remarks on approximation	95-104
D. LAU, K. DENECKE: Congruences on maximal partial clones and strong regular varieties generated by preprimal partial algebras II	105-119
Agata PILITOWSKA: Free P -bilattices	121-127
Alina WOJTUNIK: The generalized sum of an upper semilattice ordered system of algebras	129-147
Ágnes SZENDREI: A classification of strictly simple algebras with trivial subalgebras	149-173
Jerzy PŁONKA: The algebraic sum of a semilattices ordered system of relational system	175-181
Zofia MAJCHER, Jerzy PŁONKA: Connected partitions and cycle matroids of graphs	183-190
Elżbieta ZAJĄC: Constructions of left normal bandoids	191-206
K. GŁAZEK, A. KOŚLIŃSKI: On the Płonka decomposition of graphs and related algebras	207-233
Wiesława CHROMIK, Katarzyna HAŁKOWSKA: Subvarieties of the variety defined by externally compatible identities of distributive lattices	235-240
Jonathan D.H. SMITH: Skein polynomials and entropic right quasigroups	241-246
Miroslav HAVIAR: Lattices whose congruence lattices satisfy Lee's identities . . .	247-261
Arlette MAYET-IPPOLITO: Generalized orthomodular posets	263-274
Radosław GODOWSKI, Tadeusz TRACZYK: Implicative orthoposets	275-284
Olga NÁNÁSIOVÁ: Martingales and submartingales on quantum logic	285-294
Hartmut HÖFT, Margret HÖFT: Fixed point free components in lexicographic sums with the fixed point property	295-304
Katarzyna CZYŻEWSKA: Generalization of the Pythagorean theorem	305-310
Elżbieta AMBROSIEWICZ: Powers of sets of involution in linear groups	311-314
Gerhard BEHRENDT: Maximal antichains and dissecting ideals	315-321
Jan HAMHALTER, Mirko NAVARA: Orthosymmetry and modularity in ortholattices	323-329
Zdenka RIEČANOVÁ: Applications of topological methods to the completion of atomic orthomodular lattices	331-341
Josef TKADLEC: A note on distributivity in orthoposets	343-346
