

GROUPS COMPLEXITY CRYPTOLOGY

MANAGING EDITORS

Vladimir Shpilrain, *New York*
Pascal Weil, *Bordeaux*

EDITORIAL BOARD

Laura Ciobanu, *Edinburgh*
Marston Conder, *Auckland*
Patrick Dehornoy, *Caen*
Bettina Eick, *Braunschweig*
Murray Elder, *Sydney*
Ben Fine, *Fairfield*
Robert Gilman, *Hoboken*
Dima Grigoriev, *Lille*
Ki Hyoung Ko, *Daejeon*

Martin Kreuzer, *Passau*
Alexander V. Mikhalev, *Moscow*
Alexei Myasnikov, *Hoboken*
Ludovic Perret, *Paris*
Vitalii Romankov, *Omsk*
Gerhard Rosenberger, *Hamburg*
Mark Sapir, *Nashville*
Rick Thomas, *Leicester*
Boaz Tsaban, *Ramat Gan*
Enric Ventura Capell, *Barcelona*

DE GRUYTER

GROUPS – COMPLEXITY – CRYPTOLOGY is a journal for speedy publication of articles in the areas of combinatorial and computational group theory, complexity theory, and cryptology. Preference is given to papers that touch upon at least two of these areas, but strong papers representing just one of the areas are considered, too. The journal primarily publishes research papers, but comprehensive and timely survey articles on a topic inside the scope of the journal are also welcome. All submitted papers are peerreviewed before publication.

All information regarding notes for contributors, subscriptions, Open access and orders is available online at www.degruyter.com/gcc.

Contents

Robert H. Gilman, Robert P. Kropholler, Saul Schleimer
Groups whose word problems are not semilinear — 53

Pedro V. Silva, Alexander Zakharov
On finitely generated submonoids of virtually free groups — 63

Vitaly Roman'kov
Two general schemes of algebraic cryptography — 83

Mikhail Anokhin
A certain family of subgroups of \mathbb{Z}_n^* is weakly pseudo-free under the general integer factoring intractability assumption — 99

Alireza Khalili Asboei
Recognition of 2-dimensional projective linear groups by the group order and the set of numbers of its elements of each order — 111
