Journal of Causal Inference (JCI) publishes papers on theoretical and applied causal research across the range of academic disciplines that use quantitative tools to study causality.

The past two decades have seen causal inference emerge as a unified field with a solid theoretical foundation, useful in many of the empirical and behavioral sciences. Journal of Causal Inference aims to provide a common venue for researchers working on causal inference in biostatistics and epidemiology, economics, political science and public policy, cognitive science and formal logic, and any field that aims to understand causality. The journal serves as a forum for this growing community to develop a shared language and study the commonalities and distinct strengths of their various disciplines' methods for causal analysis.

Existing discipline-specific journals tend to bury causal analysis in the language and methods of traditional statistical methodologies, creating the inaccurate impression that causal questions can be handled by routine methods of regression or simultaneous equations, glossing over the special precautions demanded by causal analysis. In contrast, JCI highlights both the uniqueness and interdisciplinary nature of causal research.

Contents

Samuel David Lendle, Bruce Fireman and Mark J. van der Laan

Balancing Score Adjusted Targeted Minimum Loss-based Estimation — 139

Peter B. Gilbert, Erin E. Gabriel, Ying Huang and Ivan S.F. Chan

Surrogate Endpoint Evaluation: Principal Stratification Criteria and the Prentice Definition — 157

Susan Gruber

A Causal Perspective on OSIM2 Data Generation, with Implications for Simulation Study Design and Interpretation — 177

Elizabeth S. Allman, John A. Rhodes, Elena Stanghellini and Marco Valtorta

Parameter Identifiability of Discrete Bayesian Networks with Hidden Variables — 189

Denis Talbot, Geneviève Lefebvre and Juli Atherton

The Bayesian Causal Effect Estimation Algorithm — 207

Greg Ridgeway, Stephanie Ann Kovalchik, Beth Ann Griffin and Mohammed U. Kabeto

Propensity Score Analysis with Survey Weighted Data — 237

Comment

Peng Ding and Luke W. Miratrix

Reply to Professor Pearl's Comment — 251

Felix Thoemmes

M-bias, Butterfly Bias, and Butterfly Bias with Correlated Causes – A Comment on Ding and Miratrix (2015) — 253

Causal, Casual and Curious

Judea Pearl

Generalizing Experimental Findings — 259

Corrigendum

Corrigendum to: Targeted Learning of the Mean Outcome under an Optimal Dynamic Treatment Rule [J Causal Inference DOI: 10.1515/jci-2013-0022] — 267
