Objective
The International Journal of Biostatistics (IJB) seeks to publish new biostatistical models and methods, new statistical theory, as well as original applications of statistical methods, for important practical problems arising from the biological, medical, public health, and agricultural sciences with an emphasis on semiparametric methods. Given many alternatives to publish exist within biostatistics, IJB offers a place to publish for research in biostatistics focusing on modern methods, often based on machine-learning and other data-adaptive methodologies, as well as providing a unique reading experience that compels the author to be explicit about the statistical inference problem addressed by the paper. IJB is intended that the journal cover the entire range of biostatistics, from theoretical advances to relevant and sensible translations of a practical problem into a statistical framework. Electronic publication also allows for data and software code to be appended, and opens the door for reproducible research allowing readers to easily replicate analyses described in a paper. Both original research and review articles will be warmly received, as will articles applying sound statistical methods to practical problems.

Topics
- Biostatistical methods and models
- Statistical theory
- Biostatistics computing and applications of statistical methods for important practical problems in the biological, medical, public health, and agricultural sciences

Article formats
Research and survey articles

Information on submission process

Your benefits
- Up-to-date research on biostatistics

SUBSCRIPTION RATES FOR 2018
Online:
Institutional
€ [D] 350.00 / US$ 471.00 / GBP 287.00*
2 Issues per year
Online ISSN: 1557-4679

Language of Publication: English

Subjects:
Biochemistry
Life Sciences, other
Physics, other
Probability and Statistics

Of interest to:
Researchers and practitioners interested in biostatistics
