Objective

Reviews in Chemical Engineering publishes authoritative review articles on all aspects of the broad field of chemical engineering and applied chemistry. Its aim is to develop new insights and understanding and to promote interest and research activity in chemical engineering, as well as the application of new developments in these areas. The bimonthly journal publishes peer-reviewed articles by leading chemical engineers, applied scientists and mathematicians. The broad interest today in solutions through chemistry to some of the world’s most challenging problems ensures that Reviews in Chemical Engineering will play a significant role in the growth of the field as a whole.

Topics

Cutting-edge topics such as but not limited to the following:

- Catalysis
- Chemical, photochemical and biochemical reaction engineering
- Novel structured and membrane reactors
- Separation science and technology
- Thermodynamics
- Transport phenomena
- Particle technology and multiphase processing
- Product and process system engineering
- Process intensification and sustainable process design
- Advanced and nano materials
- Soft matter and interfaces
- Molecular design
- Environmental chemical and biochemical engineering
- Clean energy technologies
- Conversion and storage
- Multiscale modeling of chemical processes
