Why subscribe and read
The goal of the journal is to be the first and main publishing option for authors writing on noise mapping and related topics, and a hub integrating the relevant research community in the field of environmental noise and soundscape studies. Potential readers are scientists, practitioners and public bodies representatives (for example environmental protection agencies) carrying out research and/or interested in environmental noise mapping, planning and control issues.

Why submit
Ever since its inception, Noise Mapping has been offering fast and comprehensive peer-review, while featuring prominent researchers among its Advisory Board. As a result, the journal is set to acquire a growing reputation as the main publication in the field of noise mapping, thus leading to a significant Impact Factor.

Ever since its inception, Noise Mapping has been offering fast and comprehensive peer-review, while featuring prominent researchers among its Advisory Board. As a result, the journal is set to acquire a growing reputation as the main publication in the field of noise mapping, thus leading to a significant Impact Factor.

Noise Mapping is indexed in Web of Science Core Collection (Emerging Sources Citation Index) and is accepted for inclusion in Scopus – Elsevier.

All the Article Processing Charges (publication fees) in Noise Mapping are completely waived for authors who submit their manuscripts till the end of 2018.

TOPICAL ISSUE:
- Smart acoustic solutions for smart cities

GUEST EDITOR:
Sergio Luzzi, Vie En.Ro.Se. Ingegneria - Italy

The journal aims to promote and disseminate knowledge on noise mapping through the publication of high quality peer-reviewed papers focusing on the following aspects:

- noise mapping and noise action plans: case studies;
- models and algorithms for source characterization and outdoor sound propagation: proposals, applications, comparisons, round robin tests;
- local, national and international policies and good practices for noise mapping, planning, management and control;
- evaluation of noise mitigation actions;
- evaluation of environmental noise exposure;
- actions and communications to increase public awareness of environmental noise issues;
- outdoor soundscape studies and mapping;
- classification, evaluation and preservation of quiet areas.

Papers concerning noise mapping of emissions from the following sources are welcome for publication:

- roads;
- railways;
- airports and aircrafts;
- harbours and ships;
- industrial plants;
- leisure and night-life activities;
- urban areas;
- natural sound sources.
