Why subscribe and read

We would like to present to you the Forum of Clinical Oncology (FCO), the official scientific journal of the Hellenic Society of Medical Oncology.

In the Hellenic Society of Medical Oncology we want FCO to serve as a forum, for us all, to communicate clinical and research achievements in English; to share thoughts, opinions, facts, problems and solutions.

We envision the journal to be the means, by which our efforts in the fight against cancer will become known to a wider audience, thus establishing our presence in the global setting. FCO publishes original and translational research articles relevant to diagnosis and treatment of cancer, state-of-the-art reviews, case reports, research articles, statements of opinion and comments, all related to clinical practice and basic research. A large number of eminent Greek and Foreign colleagues who participate in the National and International Editorial Boards, with their continuum direction and support, guarantee the high quality of the work published in FCO. In every issue published there will be something new, enjoyable and exciting to be read.

Why submit

We would like to welcome you to the Forum of Clinical Oncology (FCO), the official scientific journal of the Hellenic Society of Medical Oncology.

In the Hellenic Society of Medical Oncology we share the view that there are many issues we deal with in our everyday clinical and research practice that are common to our colleagues geographically closer to us, in the Balkans and the Mediterranean basin, but also to those in other parts of the world. That led us to dare "the great leap forward": to broaden the scope of our Greek scientific journal for oncology, published in Greek for the last 10 years, and develop Forum of Clinical Oncology a web based open access journal in English.

FCO will serve as a forum for us all to communicate clinical and research achievements. One of the innovations of the journal is its online management from submission of an article to its publication. Online is more efficient:
submitting, reviewing, proofreading, typing and indexing. However, the most important benefit of all is easy universal access.

English has become the common language amongst scientists from around the globe. This is the reason why we chose English as the official language of the journal. Many Greek colleagues have already published work in English in distinguished journals or have studied or worked abroad. We believe that the language change will not be an impediment for our Greek colleagues to present their work in FCO, whereas on the other hand it will allow our colleagues from other countries to participate.

The Forum of Clinical Oncology publishes original and translational research articles relevant to diagnosis and treatment of cancer, state-of-the-art reviews, case reports, research articles, statements of opinion and comments, all related to clinical practice and basic research.

We share the view that there should be no barriers to knowledge and thus, we decided Forum of Clinical Oncology to be an open-access journal, i.e., any work submitted to the journal and accepted for publication shall be made immediately available to the scientific community and the general public, via the journal's website and printed version. Authors are requested to adjust accordingly the information regarding their work they wish to make public. It is the desire of the editorial team to make this journal an interactive educational tool to acquire knowledge and it is addressed to scientists working with oncology.

Please join us in our effort and submit your work to the FCO.

Similarity Check Plagiarism Screening System

The editorial board is participating in a growing community of Similarity Check System's users in order to ensure that the content published is original and trustworthy. Similarity Check is a medium that allows for comprehensive manuscripts screening, aimed to eliminate plagiarism and provide a high standard and quality peer-review process.

Detailed description of the Similarity Check System can be found at: https://www.crossref.org/services/similarity-check/
