### DESCRIPTION

---

The goal of ICOMSS'22 is to bring together mathematicians who work in the fields of Analysis and Applied Mathematics, Geometry and Algebra, Topology and to encourage collaboration and exchange of interdisciplinary ideas among the participants.

This special issue will focus on the development of mathematical modelling, analysis and applications, geometry and algebra, topology from theoretical and applied perspectives involving different applied sciences and engineering. We believe that the Complex Manifolds Journal is one of the most appropriate outlets for the publication of research related with this topic and both original research works and review articles are called for this special journal issue.

### HOW TO SUBMIT

---

Before submission authors should carefully read the [Instruction for Authors](#).

Manuscripts can be written in TeX, LaTeX (strongly recommended). Please note that we do not accept papers in Plain TEX format. Text files can be also submitted as standard DOCUMENT (.DOC) which is acceptable if the submission in LATEX is not possible. For an initial submission, the authors are strongly advised to upload their entire manuscript, including tables and figures, as a single PDF file.

All submissions to the Special Issue must be made electronically via online submission system Editorial Manager: [www.editorialmanager.com/coman/default1.aspx](http://www.editorialmanager.com/coman/default1.aspx)

All manuscripts will undergo the standard peer-review process (single blind, at least two independent reviewers). When entering your submission via online submission system please choose the option "*Special Issue - A Selcuk Meeting*" type of paper.

Submission of a manuscript implies that the work described has not been published before and it is not under consideration for publication anywhere else.

The deadline for the submissions is **January 31, 2023** but individual papers will be reviewed and published online on an ongoing basis

Contributors to the Special Issue will benefit from:

- critical peer-review
- no space constraints
- quick online publication upon completing the publishing process (**continuous publication model**)
- better visibility due to **Open Access** – free, unrestricted and permanent access to all the content
- liberal policies on copyrights (authors retain copyrights) and on self-archiving (no embargo periods)
- promotion of published papers to readers and citers
- long-term preservation – content archiving with **Portico**

We are looking forward to your submission!
