

## **SPECIAL ISSUE on Neyman (1923) and its influences on causal inference**

### **COORDINATING EDITOR**

Peng Ding, University of California, Berkeley, USA

### **DESCRIPTION**

This thematic special issue in the [Journal of Causal Inference](#) is devoted to Neyman (1923)'s seminal paper and its influences on causal inference with both experimental and observational data. The year 2023 will be the 100th anniversary of Neyman (1923)'s paper which proposed the notation of potential outcomes and the framework of design-based causal inference. [The English translation of Neyman \(1923\)](#) was published in *Statistical Science* in 1990.

Authors are requested to submit their full papers complying with the general scope of the journal and based on the above topic. The submitted papers will undergo a standard peer-review process before they can be accepted. Notification of acceptance will be communicated as we progress with the review process.

### **HOW TO SUBMIT**

Before submission authors should carefully read the [Instruction for Authors](#).

Manuscripts can be written in TeX, LaTeX (strongly recommended) - the journal's [LATEX template](#). Please note that we do not accept papers in Plain TEX format. For an initial submission, the authors are strongly advised to upload their entire manuscript, including tables and figures, as a single PDF file.

All submissions to the Special Issue must be made electronically via online submission system [ScholarOne](#):

All manuscripts will undergo a standard peer-review process. When entering your submission via online submission system, please choose the option "Special Issue on Neyman (1923) and its influences on causal inference".

Submission of a manuscript implies that the work described has not been published before and it is not under consideration for publication anywhere else.

The deadline for submissions is October 1st 2023, but individual papers will be reviewed and published online on an ongoing basis.

Contributors to the Special Issue will benefit from:

- constructive peer-review
- no space constraints
- quick online publication upon completing the publishing process (continuous publication model)

- better visibility due to Open Access – free, unrestricted and permanent access to all the content
- liberal policies on copyrights (authors retain copyrights) and on self-archiving (no embargo periods)
- promotion of published papers to readers and citers
- long-term preservation – content archiving with Portico

We are looking forward to your submission!
