

Dear Colleagues,

Cardiovascular diseases have emerged as a major health threat globally. Even though cardiovascular research in recent times has improved the interventions, preventive strategies, and prognosis of patients with cardiovascular diseases, risk factors such as diabetes, chronic inflammation and cumulative comorbidities associated with it continue to progress. Research in the entire translational spectrum is urgently required to minimise the residual cardiovascular risk in our populations. We see it as our task to get this work published.

We invite you to submit your work to a Special Issue of *Open Medicine*:

„Linking Pathobiological Mechanisms to Clinical Application for cardiovascular diseases”

In this special issue, we are interested in original and review articles that aim to provide research insights from early explorations up to implementing innovative therapeutic strategies in the area of cardiovascular diseases.

Deadline for manuscript submissions: **31 January 2024**.

I look forward to reading your novel research concepts aimed with a bench to bedside treatment strategy for cardiovascular diseases.

How to submit

Please contact the Managing Editor (Magdalena.Wierzchowiecka@degruyter.com) to inform that you are going to submit a paper to the Special Issue.

To Submit a paper please use our system: <https://www.editorialmanager.com/openmed/>
